# Interaction

## Why interaction?

- Complexity reduction
- Static = specific story told to you, versus interactive = viewer discovers the story
- Enables data exploration, insight, reasoning for oneself
- Makes it personal to the viewer
- Dive deeper!

# Interaction

A few footnotes...

- Interaction requires human time and attention
- Human-guided search vs. Automatic feature detection vs. Interactive visualizations
- Find balance between automation and relying on the human in the loop to detect patterns

# Interaction

## *Shneiderman Mantra:*

- Overview - provide high-level view/summary
- Zoom and Filter - enable data discovery and exploration, support search/tasks
- Details on Demand - do not overwhelm the viewer by providing extra information as needed

# Interaction

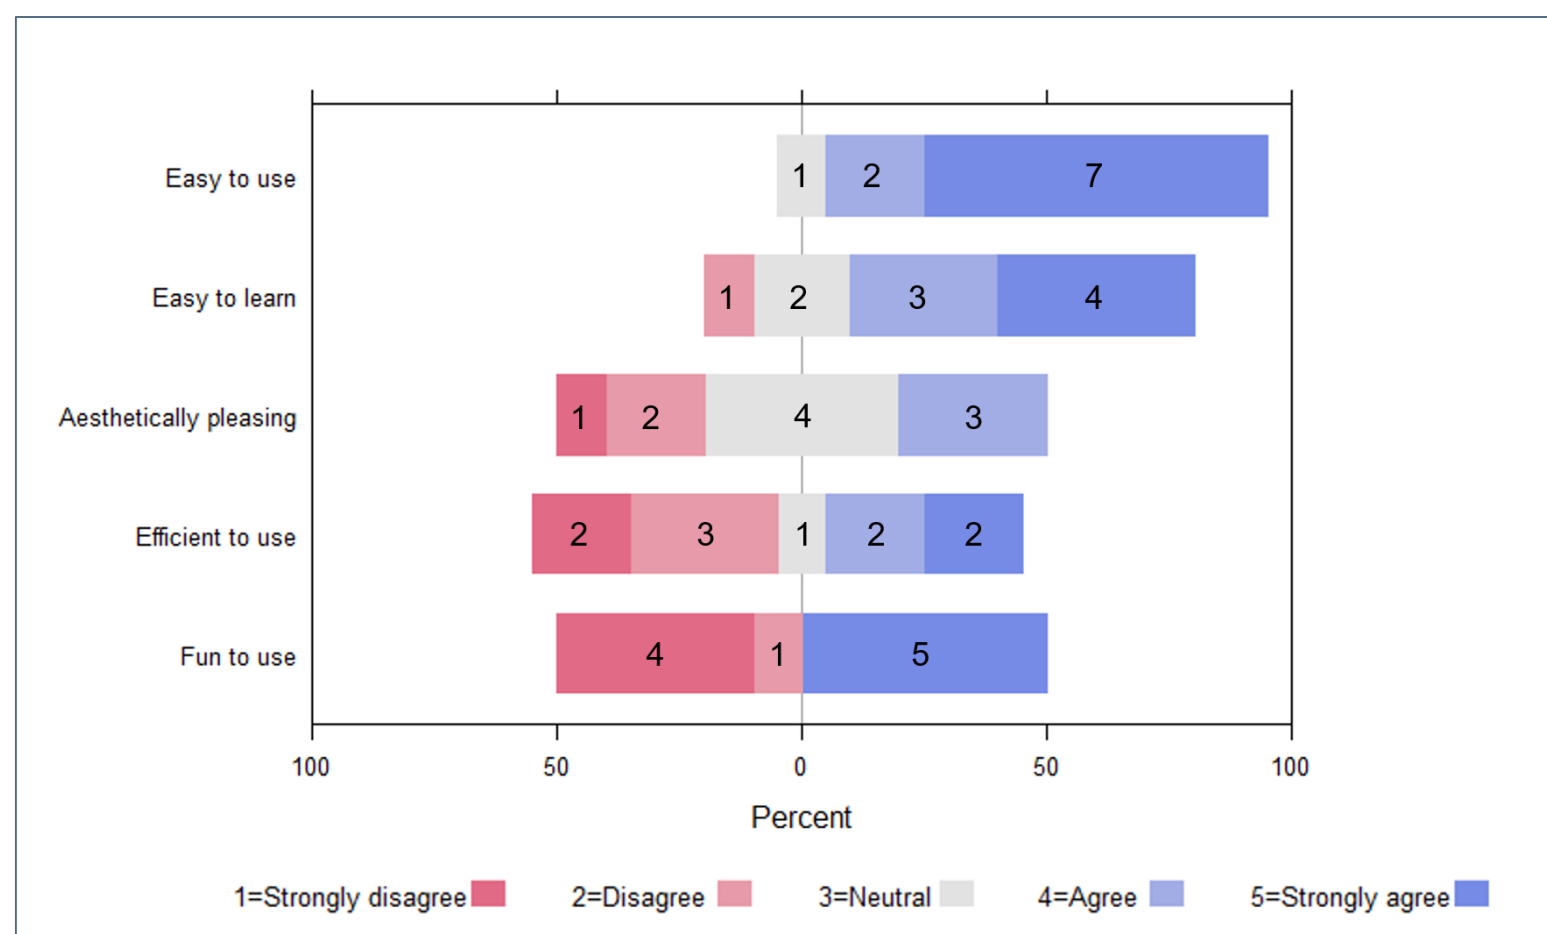

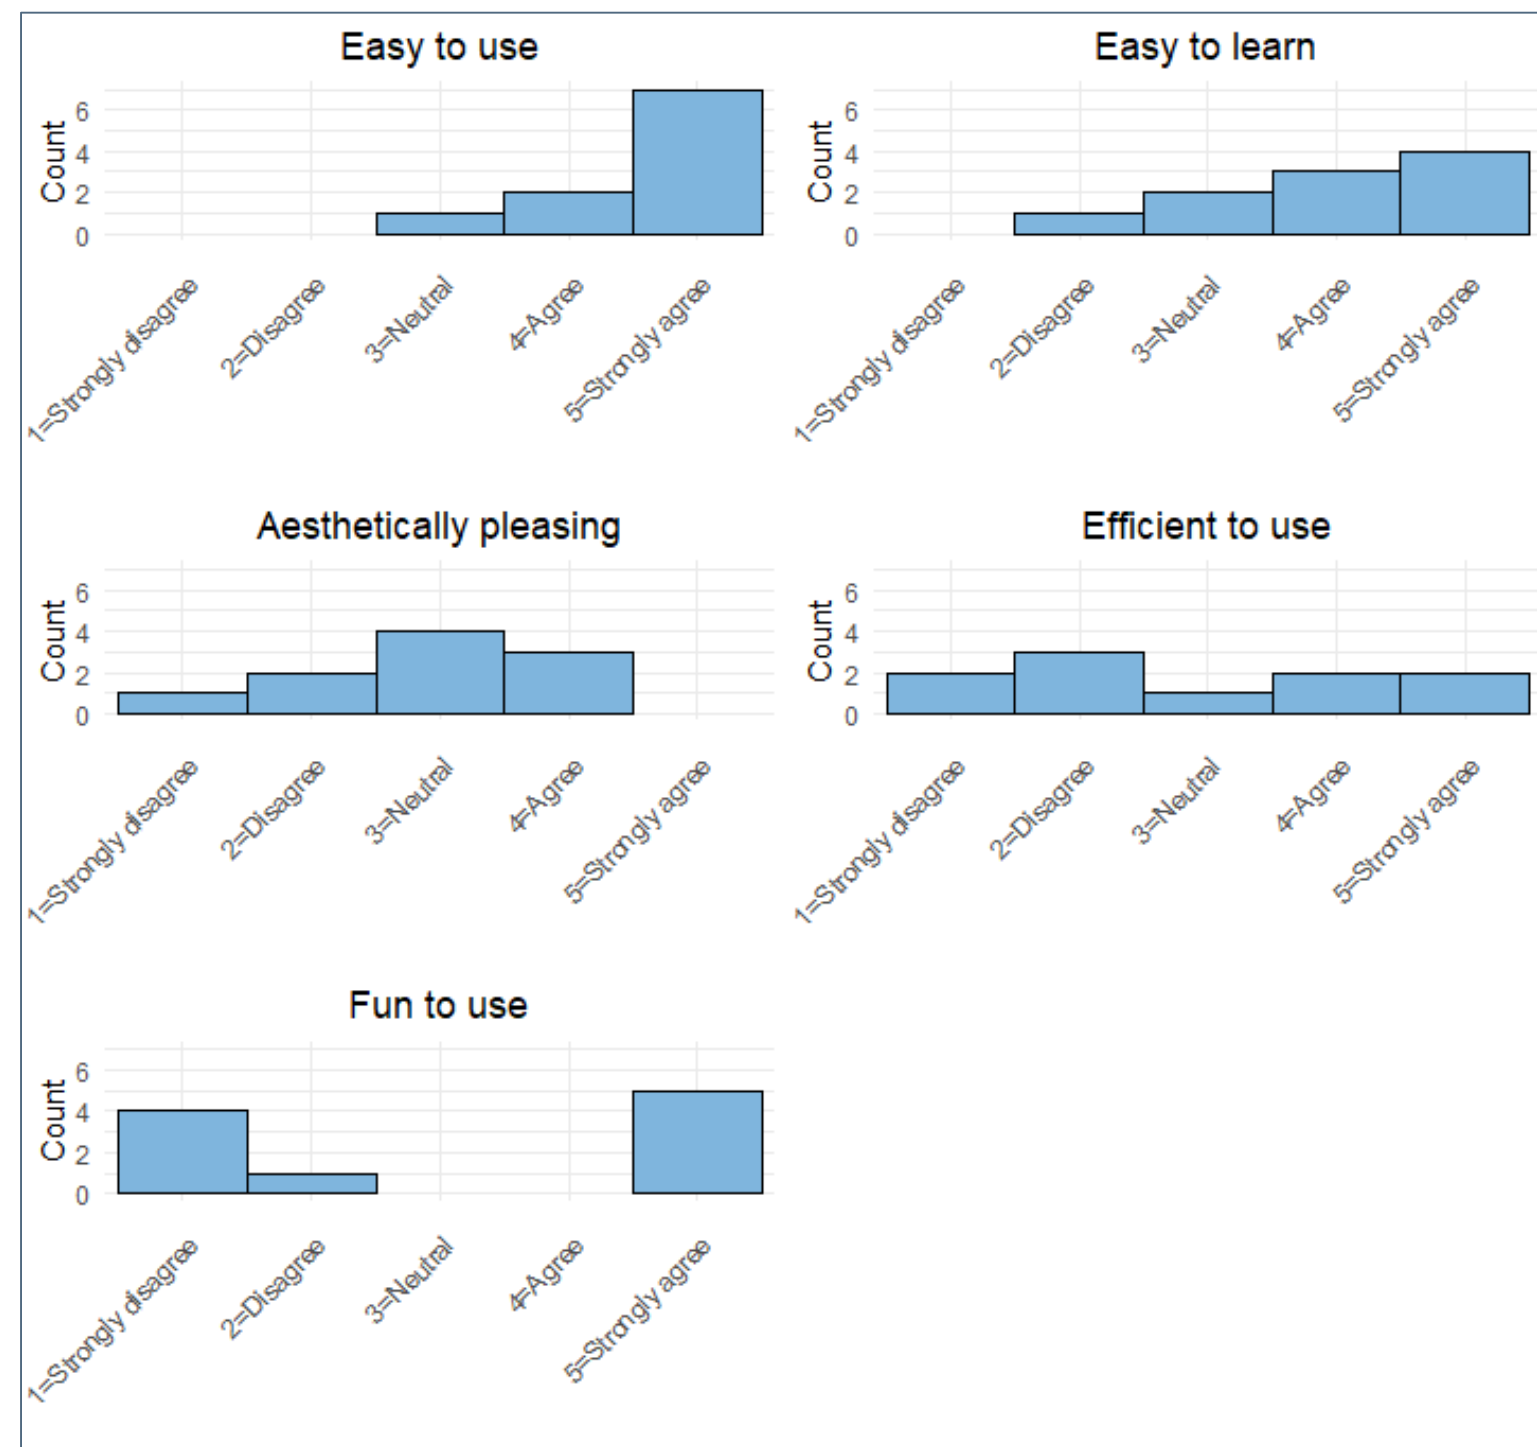

*van Ham & Perer approach:*

- Search — pick subset of data to focus on.
- Show context — show connected or relevant data for the user's current interests.
- Expand on demand — user chooses to expand the context in a direction of interest.

Now, ON DS 4200...

# IN-CLASS EXPERIMENT — LIKERT SCALE VISUALIZATION

*~20 min*

# Example Usability Test with a Paper Prototype

# THE NESTED MODEL FOR VISUALIZATION VALIDATION

# “Nested Model”

## **Domain situation**

Observe target users using existing tools

## **Data/task abstraction**

## **Visual encoding/interaction idiom** Justify design with respect to alternatives

## **Algorithm** Measure system time/memory Analyze computational complexity

Analyze results qualitatively  
Measure human time with lab experiment (*lab study*)

Observe target users after deployment (*field study*)

Measure adoption

 **Tamara**  
**Munzner**

# Threats to Validity *✓ Final Project validation*

EMPIRICAL STUDIES IN  
INFORMATION VISUALIZATION:  
SEVEN SCENARIOS

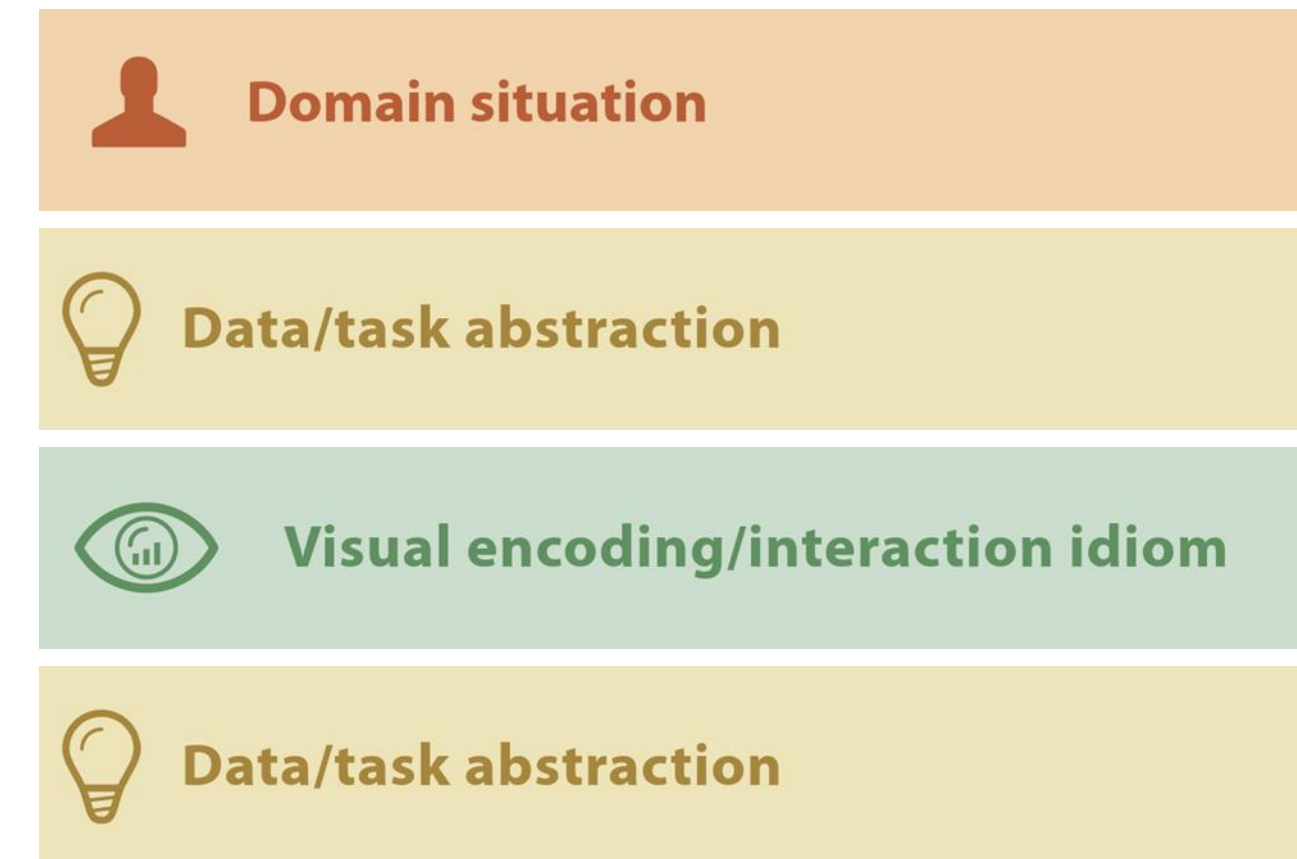

# Empirical Studies in Information Visualization: Seven Scenarios

# 7 Evaluation Scenarios

How to understand your data:

- Understanding Environments and Work Practices
- Evaluating Visual Data Analysis and Reasoning
- Evaluating Communication Through Visualization
- Evaluating Collaborative Data Analysis

How to understand your visualization:

- Evaluating User Performance
- Evaluating User Experience
- Evaluating Visualization Algorithms

# Understanding environments and work practices

Domain situation

- Goals & outputs
  - Understand work, analysis, or information processing practices of people
  - Without software in use: inform design
  - With software in use: assess factors for adoption, how appropriated for future design
- Evaluation Questions
  - Context of use?
  - Integrate into which daily activities?
  - Supported analyses?
  - Characteristics of user group and environment?
  - What data & tasks?
  - What visualizations/tools used?
  - How current tools solve tasks?
  - Challenges and usage barrier?

# Understanding environments and work practices

Domain situation

- Methods
  - Field Observation
    - Real world, free use of tool
    - Derive requirements
  - Interviews
    - Contextual inquiry: interview then observe in routines, with little interference
    - Pick the right person
    - Laboratory context w/domain expert
  - Laboratory Observation
    - How people interact with each other, tools
    - More control of situation

# Understanding environments and work practices: Example

# Evaluating visual data analysis and reasoning

Data/task abstraction

- Goals & outputs
  - Assess visualization tool's ability to support visual analysis and reasoning
    - As a whole! Not just a technique
  - Quantifiable metrics or subjective feedback
- Evaluation Questions: Does it support...
  - Data exploration?
  - Knowledge discovery?
  - Hypothesis generation?
  - Decision making?

# Evaluating visual data analysis and reasoning

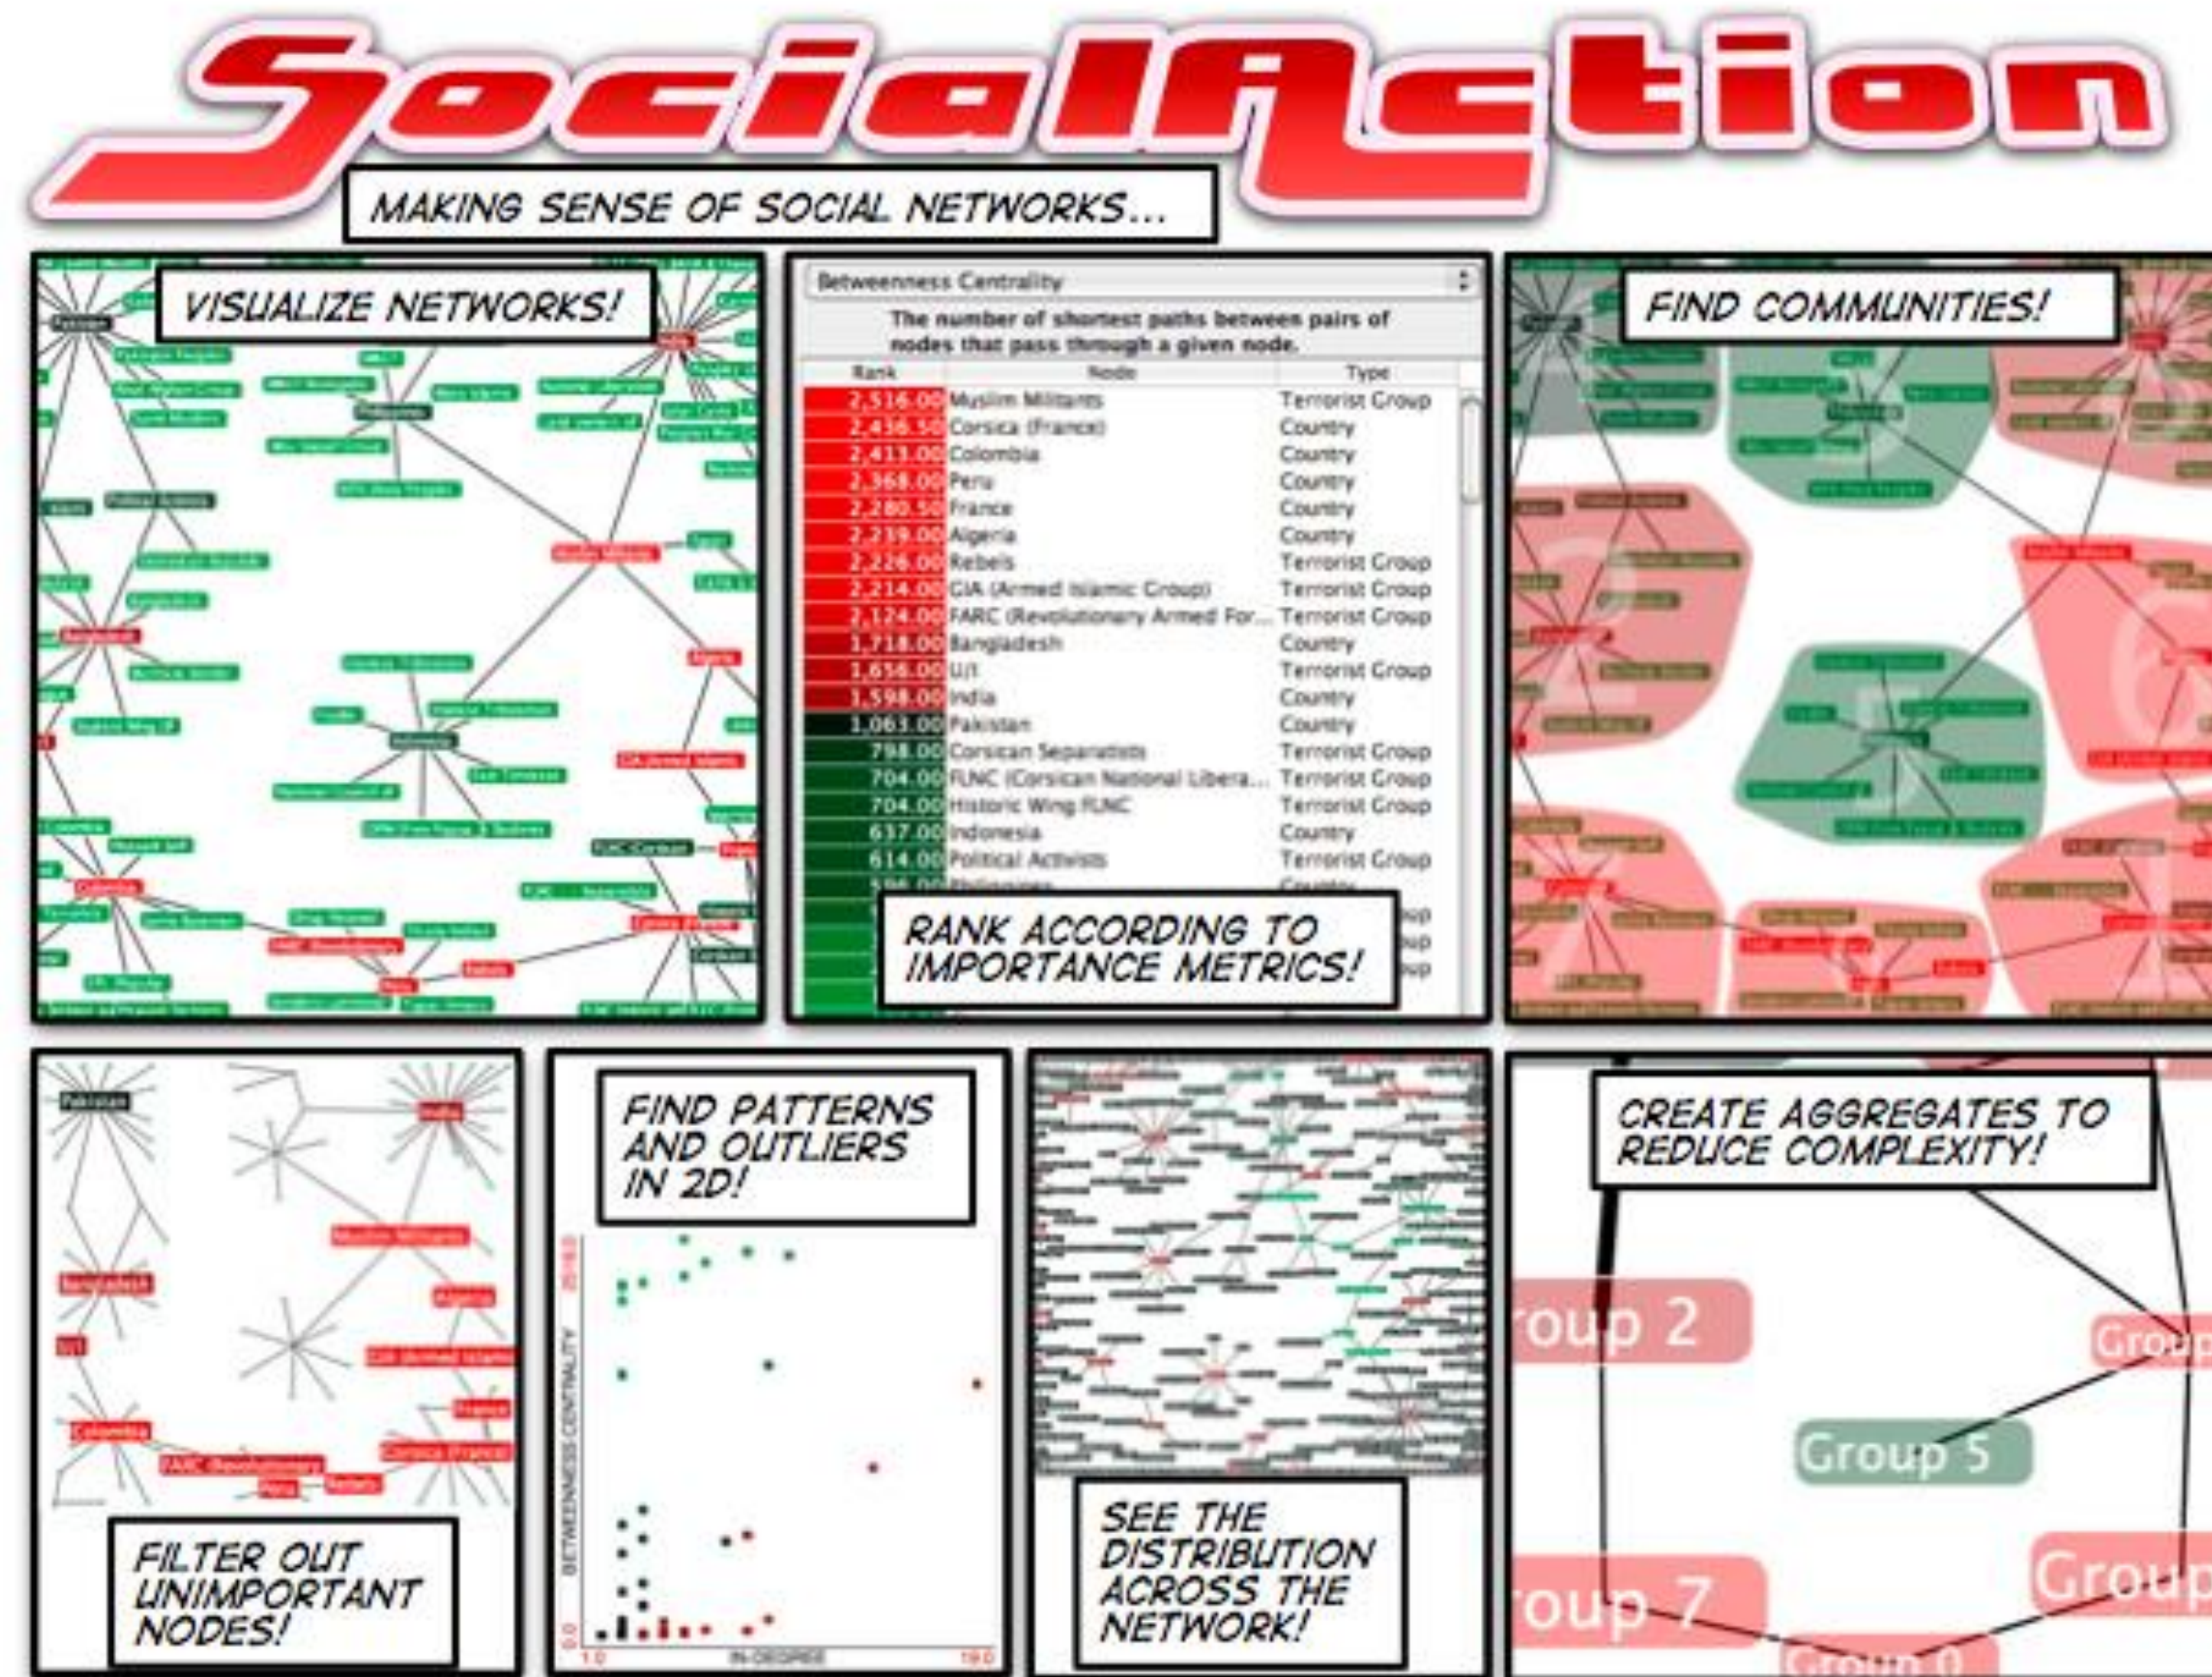

Data/task abstraction

- Methods
  - Case studies
    - Motivated experts with own data in own environment
    - Can be longitudinal
    - Insight-Based ([Saraiya et al., 2004](#))
      - Unguided, diary, debriefing meetings
    - MILCS: Multidimensional In-depth Long-term Case studies (Shneiderman & Plaisant, 2006)
      - Guided, observations, interviews, surveys, automated logging
      - Assess interface efficacy, user performance, interface utility
      - Improve system during
  - Lab observations and interviews
    - Code results
    - Think aloud
  - Controlled Experiment
    - Isolate important factors

# Evaluating visual data analysis and reasoning

# Evaluating communication through visualization

Visual encoding/interaction idiom

- Goals & outputs
  - How effectively is a message delivered and acquired
- Evaluation Questions
  - Quantitative: learning rate, information retention and accuracy
  - Qualitative: interaction patterns
- Methods
  - Controlled experiments
  - Field observation & interviews

# Evaluating communication through visualization: Example

The screenshot shows the PARSE software interface. It features five panels for different polyhedral maps: Tetrahedron Map, Cube Map, Octahedron Map, Dodecahedron Map, and Icosahedron Map. Each panel displays a network of nodes (polyhedra) connected by arrows, representing transitions between shapes. A central panel provides detailed information for the selected shape, the Rhombitruncated Cuboctahedron.

Name	Rhombitruncated Cuboctahedron
Type	Archimedean
Triangles	0
Squares	12
Pentagons	0
Hexagons	8
Octagons	6
Decagons	0
Faces	26
Vertices	48
Edges	72

Below the detailed view, there are three sliders for filtering polyhedra based on their properties:

- Number of Vertices:** 4, 6, 8, 12, 20, 24, 30, 48, 60, 120
- Number of Edges:** 6, 12, 18, 24, 30, 36, 48, 60, 72, 90, 120
- Number of Faces:** 4, 6, 8, 12, 14, 20, 26, 32

At the bottom right, there are icons for the selected polyhedron and a list of solids containing specific faces:

- Solids containing:
  - any (OR)
  - solely (AND)
  - triangles
  - squares
  - pentagons
  - hexagons
  - octagons
  - decagons

# Evaluating Collaborative Data Analysis

Data/task abstraction

- Goals & outputs
  - Evaluate support for taskwork and teamwork
  - Holistic understanding of group work processes or tool use
  - Derive design implications
- Evaluation Questions
  - Effective and efficient?
  - Satisfactorily support or stimulate group sensemaking?
  - Support group insight?
  - Is social exchange and communication facilitated?
  - How is the tool used? Features, patterns...
  - What is the process? User requirements?

# Evaluating Collaborative Data Analysis

Data/task abstraction

- Methods
  - Context critical, but early formative studies less dependant
  - Heuristic evaluation
    - Heuristics: actions, mechanics, interactions, locales needed
  - Log analysis
    - Distributed or web-based tools
    - Combine with questionnaire or interview
    - Hard to evaluate unlogged & qualitative aspects
  - Field or laboratory observation
    - Involve group interactions and harmony/disharmony
    - Combine with insight-based?

# Evaluating Collaborative Data Analysis: Examples

## Planarity Party

Can you untangle the graph? See if you can position the vertices so that no two lines cross.

**Level 1.** Number of line crossings detected: 2.

0 moves. [Next Level](#)

# Evaluating User Performance

- Goals & outputs
  - Measure specific features
  - Time, accuracy, and error; work quality (if quantifiable); memorability
  - Descriptive statistics results
- Evaluation Questions
  - What are the limits of human perception and cognition?
  - How do techniques compare?
- Methods
  - Controlled experiment → design guideline, model, head-to-head
    - Few variables
    - Simple tasks
    - Individual differences matter
  - Field logs
    - Suggest improvements, recommendation systems

Data/task abstraction

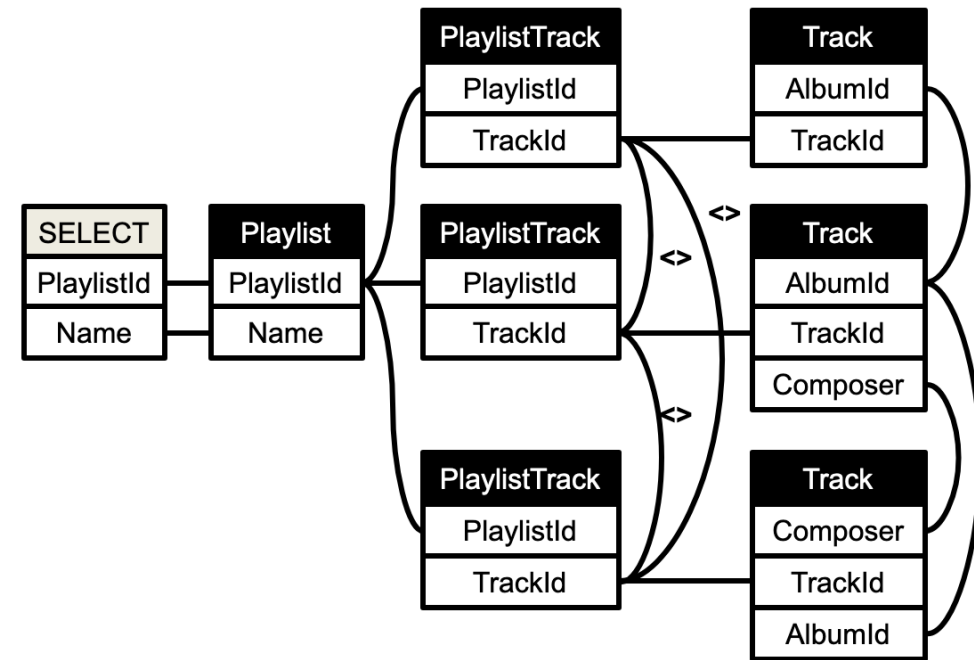

Visual encoding/interaction idiom

# Evaluating User Performance: Examples

Question 6 / 12

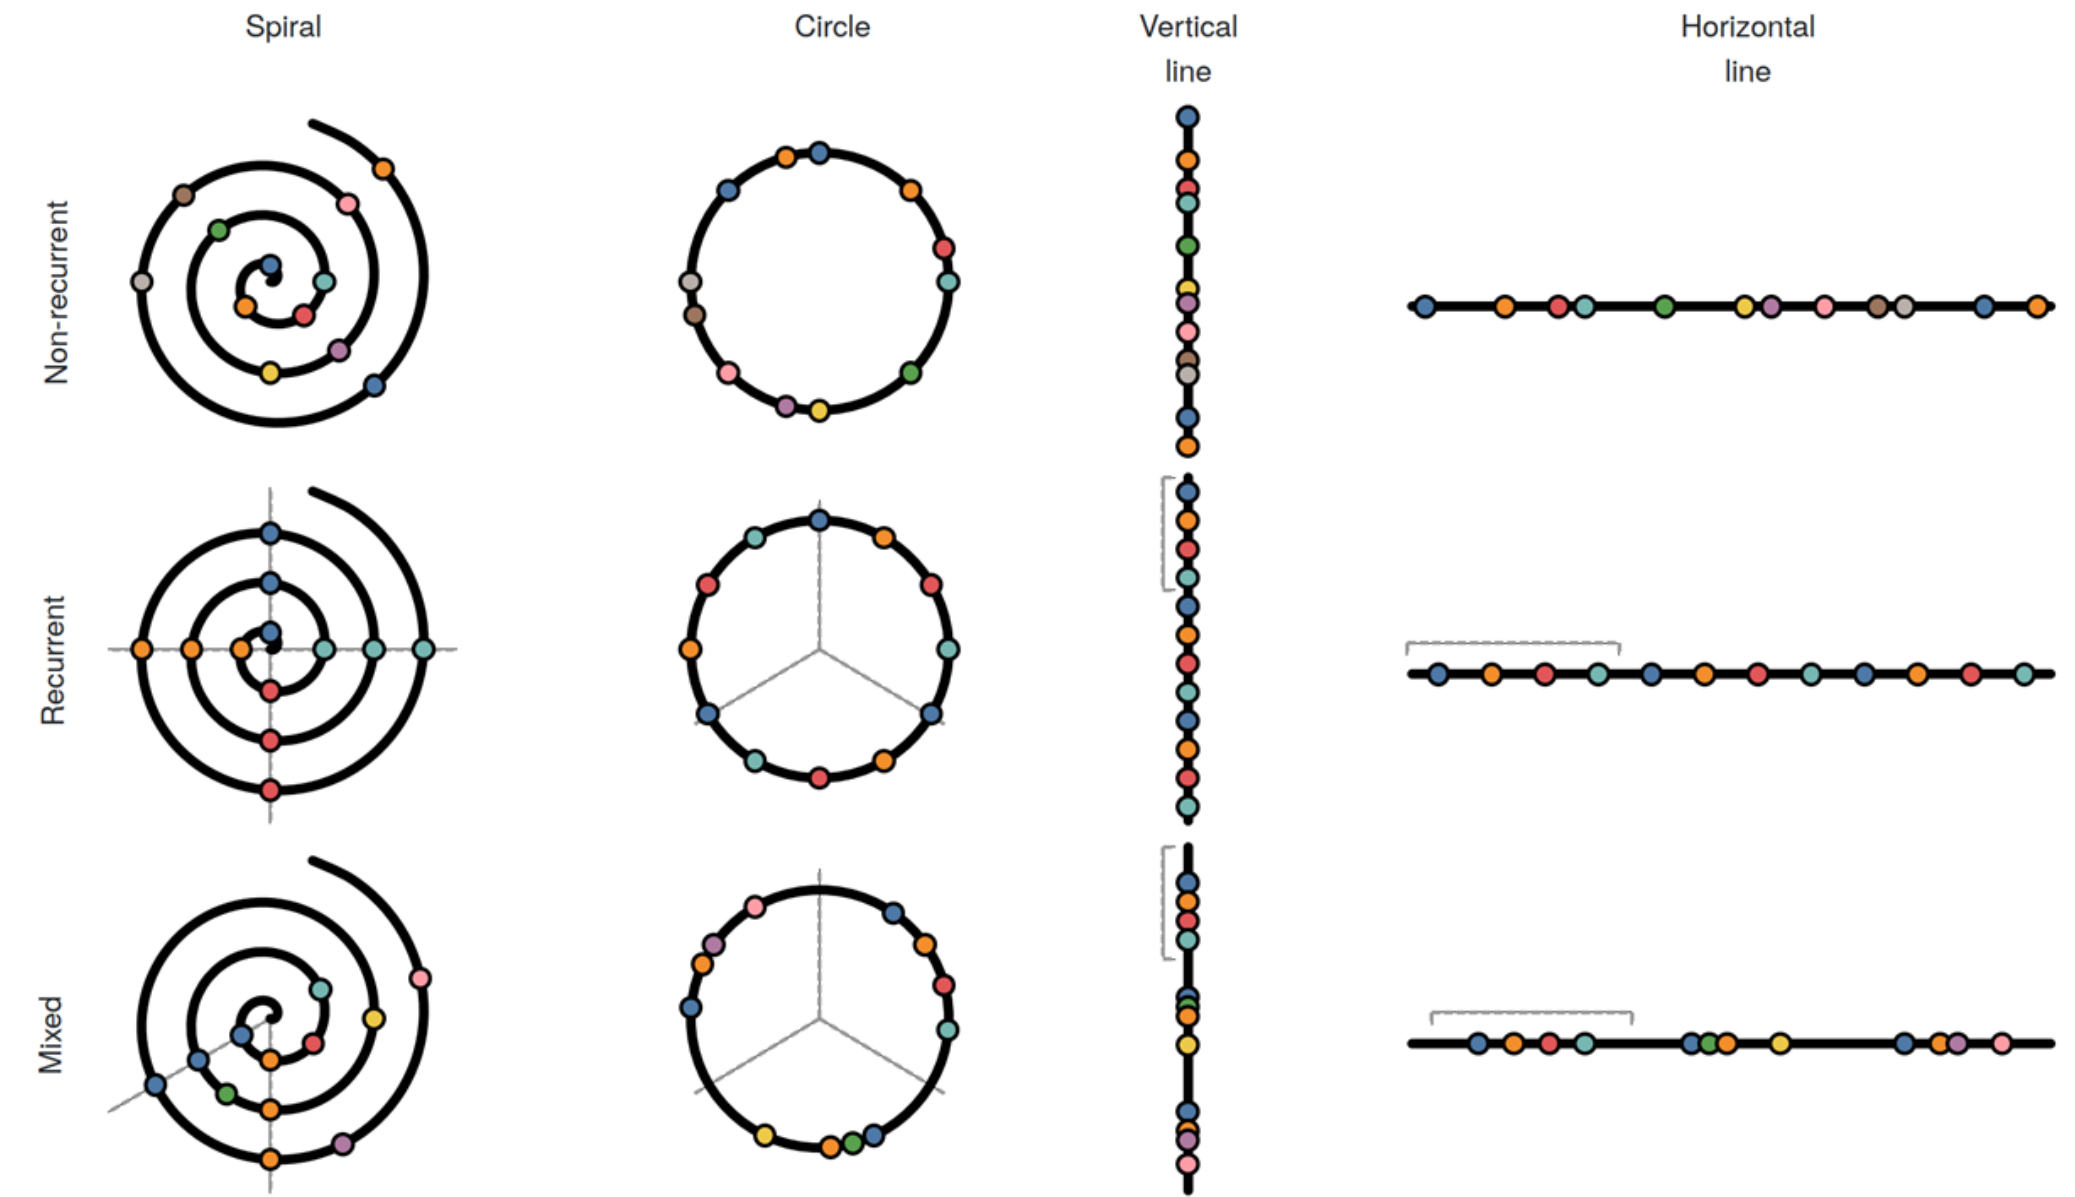

Time remaining: 48:39 minutes

```
SELECT P.PlaylistId, P.Name
FROM Playlist P, PlaylistTrack PT1,
PlaylistTrack PT2, PlaylistTrack PT3,
Track T1, Track T2, Track T3
WHERE P.PlaylistId = PT1.PlaylistId
AND P.PlaylistId = PT2.PlaylistId
AND P.PlaylistId = PT3.PlaylistId
AND PT1.TrackId <> PT2.TrackId
AND PT2.TrackId <> PT3.TrackId
AND PT1.TrackId <> PT3.TrackId
AND PT1.TrackId = T1.TrackId
AND PT2.TrackId = T2.TrackId
AND PT3.TrackId = T3.TrackId
AND T1.AlbumId = T2.AlbumId
AND T2.AlbumId = T3.AlbumId
AND T2.Composer = T3.Composer;
```

- Find playlists that have at least 3 different tracks that are in the same album and they are all made by the same composer.
- Find playlists that have at least 3 different tracks so that at least 2 of them are in the same album but all 3 tracks are made by the same composer.
- Find playlists that have at least 3 different tracks so that at least 2 of them are in the same album and made by the same composer.
- Find playlists that have at least 3 different tracks that are in the same album and at least 2 of them are made by the same composer.

[Tutorial \(PDF\)](#)

[Leventidis, Dunne, et al., 2020](#)

Dataset	Sample question	Mean Completion Time	Mean Per-Worker Log Change in Completion Time $\ln(\text{Shape} / \text{LH})$	Mean Proportion Correct
Mixed	At what time was the Group Meeting on Wednesday?			
Non-recurrent	In what year was writing invented?			
Recurrent	In which season do you plant Puffapod?			

# Evaluating User Experience

- Goals & outputs

- Inform design: uncover gaps in functionality, limitations, directions for improvement
- Subjective: user responses
  - Effectiveness, efficiency, correctness, satisfaction, trust, features liked/disliked
- Objective: body sensors, eye tracking

- Evaluation Questions

- Features: useful, missing, to rework?
- Are there limitations that hinder adoption?
- Is the tool understandable/learnable?

Data/task abstraction

Visual encoding/interaction idiom

# Evaluating User Experience

- Methods
  - Informal evaluation
    - Demo for domain experts (usually) and collect feedback
  - Usability test
    - Watch (video) how participants perform set of tasks to perfect design
    - Take note of behaviors, remarks, problems
    - Carefully prepare tasks, interview script, questionnaires
  - Field observation
    - Understand interaction in real setting
  - Laboratory questionnaire
    - Likert scale
    - Open ended

Data/task abstraction

Visual encoding/interaction idiom

# Evaluating User Experience: Example

# Evaluating Visualization Algorithms

- Goals & outputs
  - Quantitatively or qualitatively judge generated output quality (metrics) & performance
  - How scores vs. alternatives
  - Explore limits & behavior
- Evaluation Questions
  - Which shows interesting patterns best?
  - Which is more truthful?
  - Which is less cluttered?
  - Faster, less memory, less money?
  - How does it scale?
  - Extreme cases?

Data/task abstraction

Visual encoding/interaction idiom

# Evaluating Visualization Algorithms

- Methods
  - Visualization quality assessment
    - Readability metrics, image quality measures
  - Algorithmic performance
    - Varied data, size, complexity, corner cases
    - Benchmark data sets

Data/task abstraction

Visual encoding/interaction idiom

# Evaluating Visualization Algorithms: Example
