

Installing MySQL Server on MAC OS X and updating user settings.

- 1) Download the DMG archive Installer for the MySQL Server. You can find the installer at the following link: <https://dev.mysql.com/downloads/mysql/>

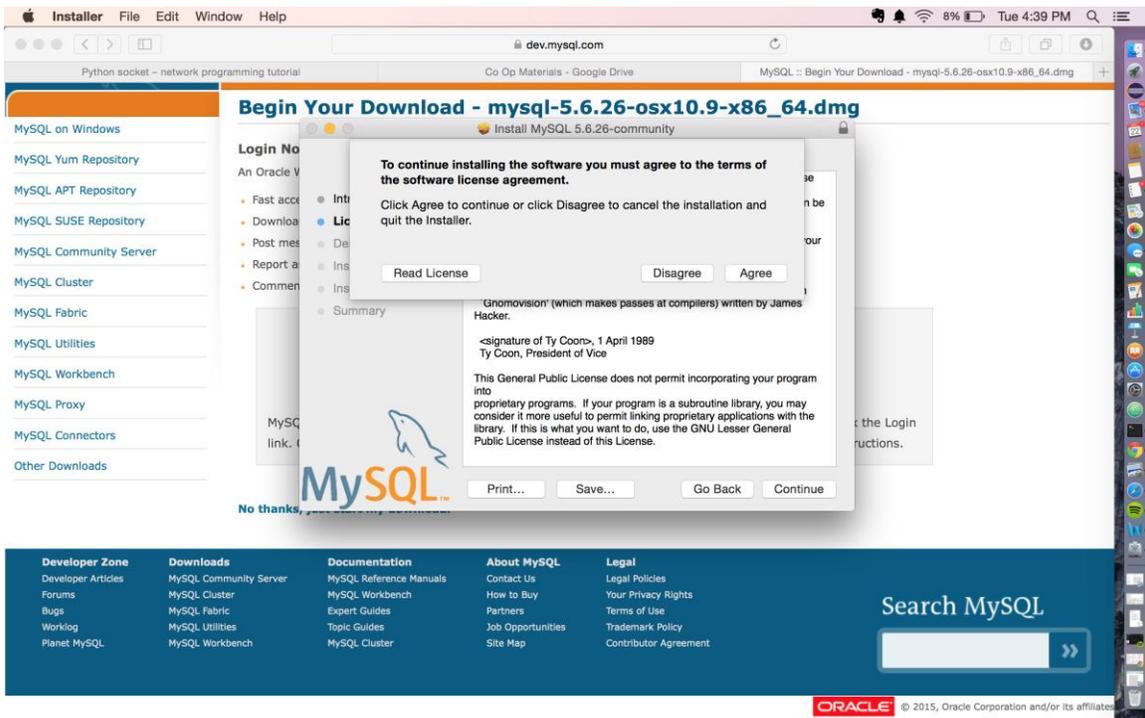

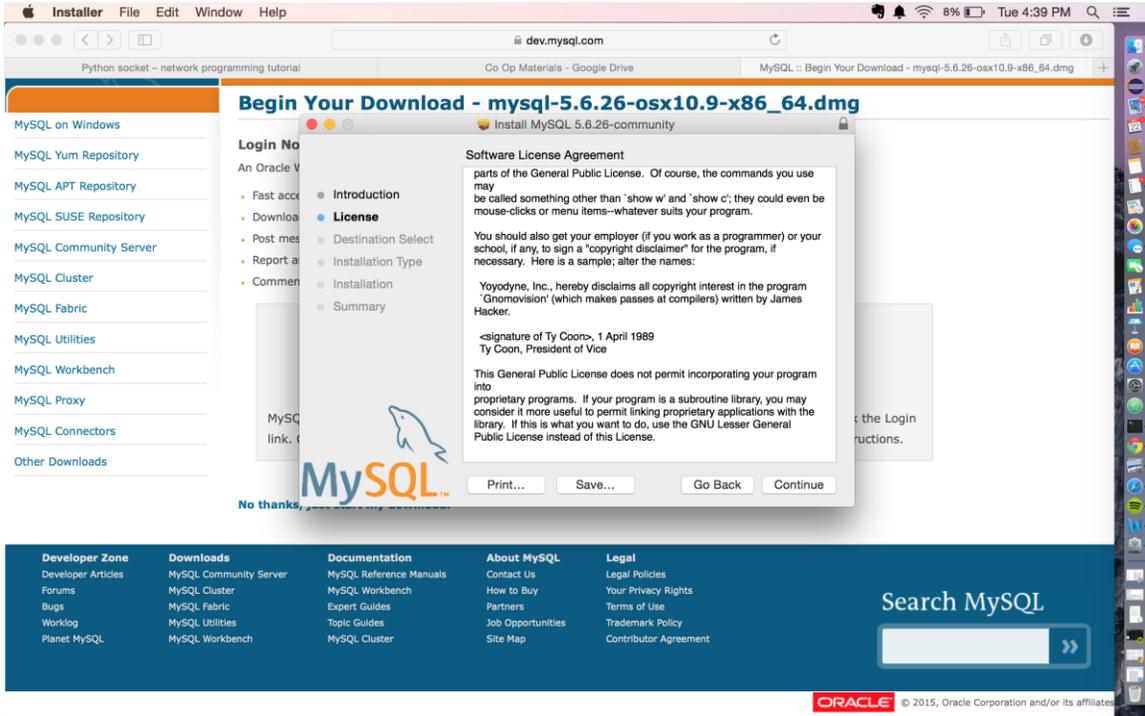

- 2) Click on the Mac OS X 10.9 (x86, 64-bit), file and begin installation.

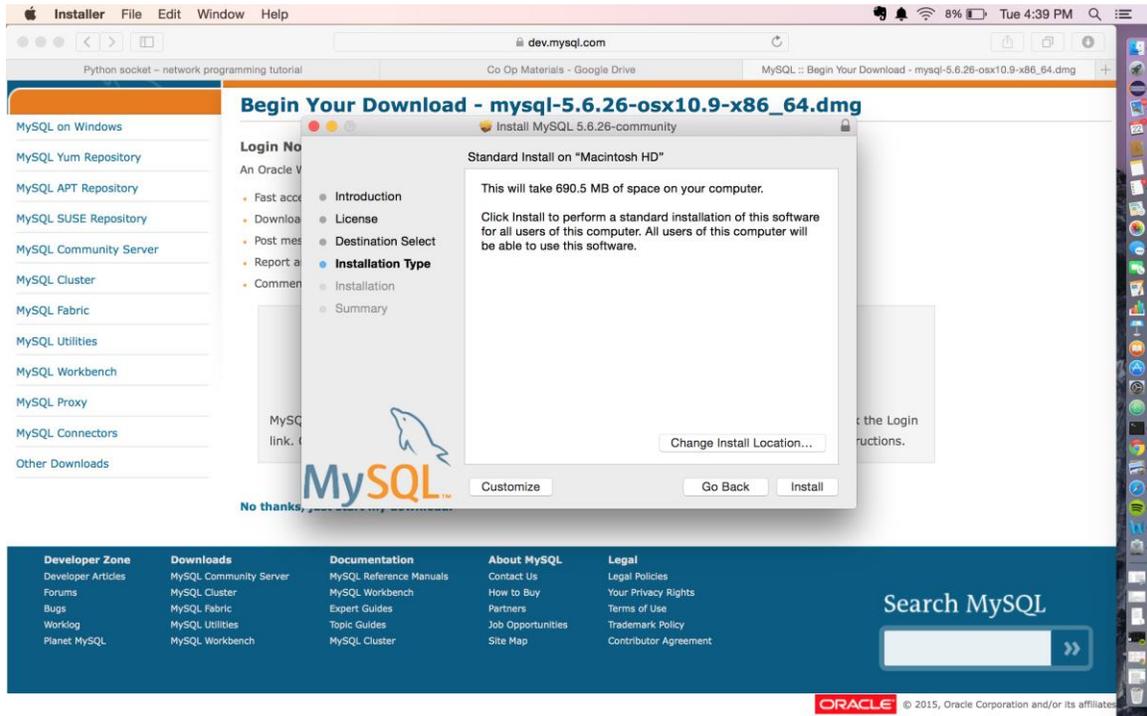

3) Click continue to Advance the installation and Agree with the software installation.

- 4) Select Continue to advance the installation and choose the file installation location.

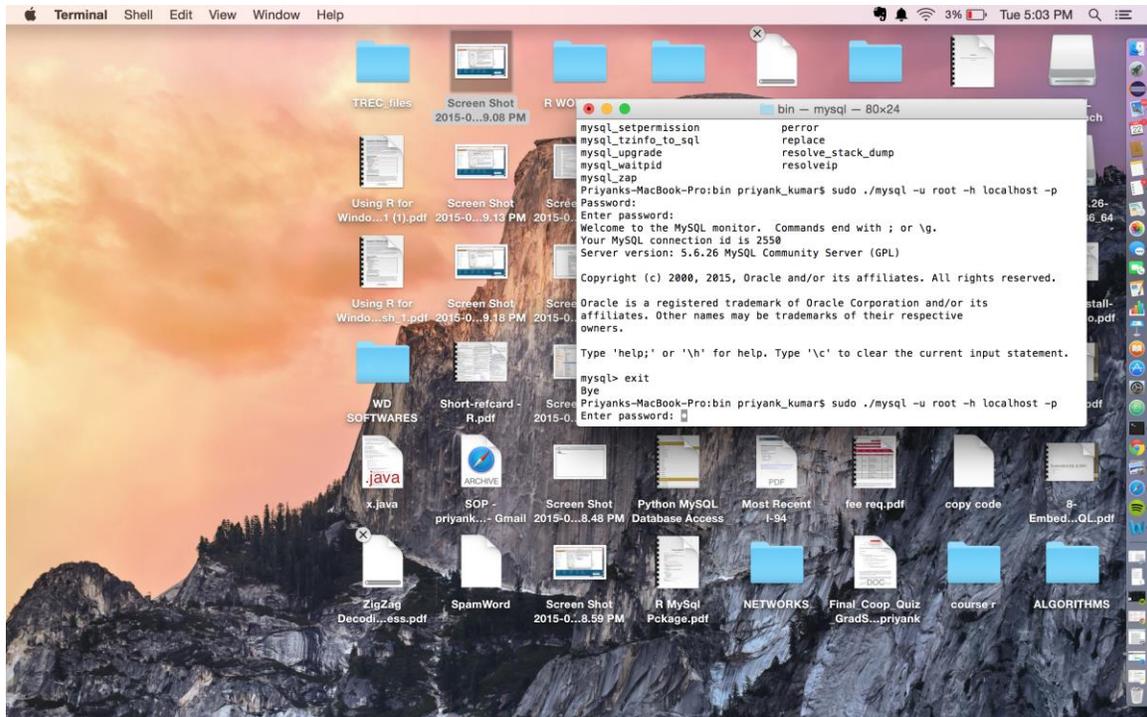

Proceed with the default installation in case you do not want to change the installation location. You should meet the space requirements of installation package.

- 5) Click Install and wait for the installation to complete. In case of successful installation you will get a success message.
- 6) Open Terminal and key in the following command: `sudo ./mysql -u root -h localhost -p`

Note: Change the path to your MySQL installation directory. For default installations the path is `/usr/local/mysql/bin/mysql`. This must be done before you execute the following command.

You will be prompted to enter a **password**: Enter your system password. Then you will be asked to **enter password** (this is the password for the root user). Hit return. By default there is no password set for the system user root.

7) In the MySQL console type: show databases; For a default MySQL installation you should see the following databases except my_test_schema.

```
mysql_convert_table_format  mysqlhotcopy
mysql_embedded             mysqlimport
mysql_find_rows            mysqlshow
mysql_fix_extensions        mysqlslap
mysql_plugin                mysqltest
mysql_secure_installation  mysqltest_embedded
mysql_setpermission        perror
mysql_tzinfo_to_sql        replace
mysql_upgrade              resolve_stack_dump
mysql_waitpid              resolveip
mysql_zap

Priyanks-MacBook-Pro:bin priyank_kumar$ sudo ./mysql -u root -h localhost -p

mysql> █
```

- 9) Now do a select from the user table to see the users. If you want to set a password for any user you can do that by forming and running a update query on the user table.

- 10) To exit the MySQL terminal console use: **quit**;
