CS 4120: Natural Language Processing

Instructor: Prof. Lu Wang
Northeastern University
Webpage: www.ccs.neu.edu/home/luwang
Logistics

• Assignment 2 is due Feb 28, 11:59pm.

• Additional TA office hours for the week:
  • Monday: 4:00 pm - 6:00 pm (162 WVH)
  • Wednesday: 4:00 pm - 6:00 pm (162 WVH)
  • Thursday: 5:00 - 6:00 pm (WVH 1st floor common lab)
  • Friday: 5:30 pm - 7:30 pm (WVH 1st floor common lab)

• Final exam: April 16, 10:30am-12:30pm, location: TBD
  • Open book, any textbook or note is fine, you can even bring laptop
  • But NO Internet access or search, messaging, cellphone usage
  • No heavy calculation, no programming
Question Answering

Learn from yesterday, live for today, hope for tomorrow.
The important thing is not to stop questioning.

– Albert Einstein

Question Answering (Some Background)

One of the oldest NLP tasks (punched card systems in 1961)

Question: What do worms eat?  

Potential Answers: Worms eat grass  

Worms  

eat  

grass  

Birds eat worms  

Grass is eaten by worms  

Simmons, Klein, McConlogue. 1964. Indexing and Dependency Logic for Answering English Questions. American Documentation 15:30, 196-204
Question Answering

One of the oldest NLP tasks (punched card systems in 1961)

Question Answering

One of the oldest NLP tasks (punched card systems in 1961)

Question: What do worms eat?

Potential Answers:

Worms eat grass
Horses with worms eat grass

Birds eat worms
Grass is eaten by worms
Question Answering: IBM’s Watson

- Won Jeopardy on February 16, 2011!

William Wilkinson’s “An Account of the Principalities of Wallachia and Moldovia” inspired this author’s most famous novel.

Bram Stoker
Apple’s Siri

“Do I need an umbrella tomorrow in San Francisco”

Yes, San Francisco should get rain tomorrow:

Types of Questions in Modern Systems

• Factoid questions
  • *Who wrote “The Universal Declaration of Human Rights”?*
  • *How many calories are there in two slices of apple pie?*
  • *What is the average age of the onset of autism?*
  • *Where is Apple Computer based?*

• Complex (narrative) questions:
  • *In children with an acute febrile illness, what is the efficacy of acetaminophen in reducing fever?*
  • *What do scholars think about Jefferson’s position on dealing with pirates?*
Types of Questions in Modern Systems

- **Factoid questions**
  - Who wrote “The Universal Declaration of Human Rights”?
  - How many calories are there in two slices of apple pie?
  - What is the average age of the onset of autism?
  - Where is Apple Computer based?

- **Complex (narrative) questions:**
  - In children with an acute febrile illness, what is the efficacy of acetaminophen in reducing fever?
  - What do scholars think about Jefferson’s position on dealing with pirates?

This lecture

Bonus assignment (detailed later)
## Commercial systems: mainly factoid questions

<table>
<thead>
<tr>

</table>
Paradigms for Factoid QA

• Information Retrieval (IR)-based approaches
  • IBM Watson (some parts); Google

• Knowledge-based and Hybrid approaches
  • IBM Watson; Apple Siri; Wolfram Alpha

• Built upon the above two:
  • Data-driven, neural network-based approaches (more recent, but often relies on retrieval AND knowledge)
Information Retrieval (IR)-based QA

- Factoid QA pipeline
- Factoid QA evaluation
- Common Knowledge used in QA
- Recent QA tasks
IR-based Factoid QA
IR-based Factoid QA

• QUESTION PROCESSING
  • Detect question type, answer type, focus, relations
    • “Who is the president of US?” → person
  • Formulate queries to send to a search engine
    • “president of United States”

• PASSAGE RETRIEVAL
  • Retrieve ranked documents
  • Break into suitable passages and rerank

• ANSWER PROCESSING
  • Extract candidate answers
  • Rank candidates
    • using evidence from the text and external sources
Question Processing:
Things to extract from the question

• Answer Type Detection
  • Decide the **named entity type** (person, place) of the answer

• Query Formulation
  • Choose **query keywords** for the IR system

• Question Type classification
  • Is this a definition question, a math question, a list question?

• Focus Detection
  • Find the question words that are replaced by the answer

• Relation Extraction (if there are more than one entities)
  • Find relations between entities in the question
**Jeopardy!**: They’re the two states you could be reentering if you’re crossing Florida’s northern border.

You should answer: what are the states of **Georgia and Alabama**?

- **Answer Type**: US state
- **Query Formulation**: two states, border, Florida, north
- **Focus**: the two states
- **Relations**: borders(Florida, ?x, north)
IR-based Factoid QA

- **QUESTION PROCESSING**
  - Detect question type, answer type, focus, relations
    - ”Who is the president of US?” -> person
  - Formulate queries to send to a search engine
    - “president of United States”

- **PASSAGE RETRIEVAL**
  - Retrieve ranked documents
  - Break into suitable passages and rerank

- **ANSWER PROCESSING**
  - Extract candidate answers
  - Rank candidates
    - using evidence from the text and external sources
Answer Type Detection: Named Entities

• *Who founded Virgin Airlines?*
Answer Type Detection: Named Entities

• *Who founded Virgin Airlines?*
  • PERSON

• *What Canadian city has the largest population?*
Answer Type Detection: Named Entities

• Who founded Virgin Airlines?
  • PERSON

• What Canadian city has the largest population?
  • CITY
Answer Type Taxonomy

Xin Li, Dan Roth. 2002. Learning Question Classifiers. COLING'02

• 6 coarse classes
  • ABBREVIATION, ENTITY, DESCRIPTION, HUMAN, LOCATION, NUMERIC

• 50 finer classes
  • LOCATION: city, country, mountain...
  • HUMAN: group, individual, title, description...
  • ENTITY: animal, body, color, currency...
Part of Li & Roth’s Answer Type Taxonomy

- LOCATION
  - country
  - city
  - state

- DESCRIPTION
  - reason
  - definition
  - food
  - currency
  - animal
  - date
  - percent
  - distance

- NUMERIC
  - money
  - size

- ABBREVIATION
  - expression
  - abbreviation
  - individual
  - title
  - group

Answer types in Jeopardy

- 2500 answer types in 20,000 Jeopardy question sample
- The most frequent 200 answer types cover ~ 50% of data
- The 40 most frequent Jeopardy answer types
  - country, city, man, film, state, author, group, here, company, president, capital, star, novel, character, woman, river, island, king, song, part, series, sport, singer, actor, play, team, show, actress, animal, presidential, composer, musical, nation, book, title, leader, game

IR-based Factoid QA
Answer Type Detection

• Hand-written rules
• Machine Learning
Answer Type Detection

• Regular expression-based rules can get some cases:
  • Who {is|was|are|were} PERSON
  • PERSON (YEAR – YEAR)

• Other rules use the question headword:
  (the headword of the first noun phrase after the wh-word)

• Which city in China has the largest number of foreign financial companies?
• What is the state flower of California?
Answer Type Detection

• Most often, we treat the problem as machine learning classification
  • **Define** a taxonomy of question types (similar as answer types)
  • **Annotate** training data for each question type
  • **Train** classifiers for each question class using a rich set of features.
    • *features include those hand-written rules!*
Features for Answer Type Detection

• Question words and phrases
• Part-of-speech tags
• Parse features (headwords)
• Named Entities
• Semantically related words

Which **city** in China has the largest number of foreign financial companies?
What is the state **flower** of California?
Query Formulation

• **QUESTION PROCESSING**
  - Detect question type, answer type, focus, relations
    - "Who is the president of US?" -> person
  - Formulate queries to send to a search engine
    - "president of United States"

• **PASSAGE RETRIEVAL**
  - Retrieve ranked documents
  - Break into suitable passages and rerank

• **ANSWER PROCESSING**
  - Extract candidate answers
  - Rank candidates
    - using evidence from the text and external sources
Keyword Selection Algorithm

1. Select all non-stop words in quotations
2. Select all NNP words in recognized named entities
3. Select all complex nominals with their adjectival modifiers
4. Select all other complex nominals
5. Select all nouns with their adjectival modifiers
6. Select all other nouns
7. Select all verbs
8. Select all adverbs
9. Select the question focus word (skipped in all previous steps)
10. Select all other words
Choosing keywords from the query

Who coined the term “cyberspace” in his novel “*Neuromancer*”?

cyberspace/1 Neuromancer/1 term/4 novel/4 coined/7
IR-based Factoid QA

- QUESTION PROCESSING
  - Detect question type, answer type, focus, relations
    - “Who is the president of US?” -> person
  - Formulate queries to send to a search engine
    - “president of United States”

- PASSAGE RETRIEVAL
  - Retrieve ranked documents
  - Break into suitable passages and rerank

- ANSWER PROCESSING
  - Extract candidate answers
  - Rank candidates
    - using evidence from the text and external sources
Passage Retrieval

• Step 1: IR engine retrieves documents using query terms
• Step 2: Segment the documents into shorter units
  • E.g. paragraphs or consecutive sentences
  • Think about why? Why not single sentences?
• Step 3: Passage ranking
  • E.g. use answer type to help rerank passages
Features for Passage Ranking

Either in rule-based classifiers or with supervised machine learning

- Number of Named Entities of the right type in passage
- Number of query words in passage
- Number of question N-grams also in passage
- Proximity of query keywords to each other in passage
- Longest sequence of question words
- Rank of the document containing passage
IR-based Factoid QA

- **QUESTION PROCESSING**
  - Detect question type, answer type, focus, relations
    - "Who is the president of US?" -> person
  - Formulate queries to send to a search engine
    - "president of United States"

- **PASSAGE RETRIEVAL**
  - Retrieve ranked documents
  - Break into suitable passages and rerank

- **ANSWER PROCESSING**
  - Extract candidate answers
  - Rank candidates
    - using evidence from the text and external sources
IR-based Factoid QA

• QUESTION PROCESSING
  • Detect question type, answer type, focus, relations
    • "Who is the president of US?" -> person
  • Formulate queries to send to a search engine
    • “president of United States”

• PASSAGE RETRIEVAL
  • Retrieve ranked documents
  • Break into suitable passages and rerank

• ANSWER PROCESSING
  • Extract candidate answers
  • Rank candidates
    • using evidence from the text and external sources
Answer Extraction

• Run an answer-type named-entity tagger on the passages
  • Each answer type requires a named-entity tagger that detects it
  • If answer type is CITY, tagger has to tag CITY
    • Can be full NER, simple regular expressions, or hybrid

• Return the string with the right type:
  • Who is the prime minister of India (PERSON)
    Manmohan Singh, Prime Minister of India, had told left leaders that the deal would not be renegotiated.
  • How tall is Mt. Everest? (LENGTH)
    The official height of Mount Everest is 29035 feet
Adding Analysis Patterns

• “Who is Elvis?”
  • Question type: “who” (answer type is PERSON)
  • Named-entity tagging: “Who is <person-name> Elvis</person-name>”
  • Analysis pattern: if question type = “who” and question contains <person-name> then...

• Desired answer probably is a description

• Likely answer extraction patterns
  • “Elvis, the X”, e.g., “Elvis, the king of rock and roll!”
  • “the X Elvis”, e.g., “the legendary entertainer Elvis”
IR-based Factoid QA

• **QUESTION PROCESSING**
  - Detect question type, answer type, focus, relations
    - ”Who is the president of US?” -> person
  - Formulate queries to send to a search engine
    - “president of United States”

• **PASSAGE RETRIEVAL**
  - Retrieve ranked documents
  - Break into suitable passages and rerank

• **ANSWER PROCESSING**
  - Extract candidate answers
  - Rank candidates
    - using evidence from the text and external sources
Ranking Candidate Answers

• But what if there are multiple candidate answers!

Q: Who was Queen Victoria’s second son?

• Answer Type: Person

Passage:

The Marie biscuit is named after Marie Alexandrovna, the daughter of Czar Alexander II of Russia and wife of Alfred, the second son of Queen Victoria and Prince Albert.
Q: Who was Queen Victoria’s second son?

Answer Type: Person

Passage:

The Marie biscuit is named after Marie Alexandrovna, the daughter of Czar Alexander II of Russia and wife of Alfred, the second son of Queen Victoria and Prince Albert.
Use machine learning: Features for ranking candidate answers

**Answer type match:** Candidate contains a phrase with the correct answer type.

**Pattern match:** Regular expression pattern matches the candidate.

**Question keywords:** # of question keywords in the candidate.

**Keyword distance:** Distance in words between the candidate and query keywords.

**Novelty factor:** A word in the candidate is not in the query.

**Apposition features:** The candidate is an appositive to question terms.

**Punctuation location:** The candidate is immediately followed by a comma, period, quotation marks, semicolon, or exclamation mark.

**Sequences of question terms:** The length of the longest sequence of question terms that occurs in the candidate answer.
Candidate Answer scoring in IBM Watson

• Each candidate answer gets scores from >50 components
  • (from unstructured text, semi-structured text, triple stores like knowledge bases)

• logical form (parse) match between question and candidate
• passage source reliability
• geospatial location
  • California is “southwest of Montana”
• temporal relationships
• taxonomic classification
Information Retrieval (IR)-based QA

• Factoid QA pipeline
• Factoid QA evaluation
• Common Knowledge used in QA
• Recent QA tasks
Common Evaluation Metrics

1. **Accuracy** (does answer match gold-labeled answer?)
2. **Mean Reciprocal Rank**
   - For each query return a ranked list of $M$ candidate answers.
   - Query score is $1/$Rank of the first correct answer
     - If first answer is correct: 1
     - else if second answer is correct: $\frac{1}{2}$
     - else if third answer is correct: $\frac{1}{3}$, etc.
     - Score is 0 if none of the $M$ answers are correct
   - Take the mean over all $N$ queries

$$MRR = \frac{1}{N} \sum_{i=1}^{N} \frac{1}{\text{rank}_i}$$

Examples
Information Retrieval (IR)-based QA

- Factoid QA pipeline
- Factoid QA evaluation
- Common Knowledge used in QA
- Recent QA tasks
Knowledge in QA

• What are other types of knowledge useful for a QA system?
  • Relations
  • Temporal information
  • Dialogue context
Relation Extraction

• Answers: Databases of Relations
  • born-in(“Emma Goldman”, “June 27 1869”)
  • author-of(“Cao Xue Qin”, “Dream of the Red Chamber”)
  • Draw from Wikipedia infoboxes, DBpedia, FreeBase, etc.

• Questions: Extracting Relations in Questions

  Whose granddaughter starred in E.T.?
Relation Extraction

• Answers: Databases of Relations
  • born-in(“Emma Goldman”, “June 27 1869”)
  • author-of(“Cao Xue Qin”, “Dream of the Red Chamber”)
  • Draw from Wikipedia infoboxes, DBpedia, FreeBase, etc.

• Questions: Extracting Relations in Questions
  Whose granddaughter starred in E.T.?
  (acted-in ?x “E.T.”)
  (granddaughter-of ?x ?y)
Temporal Reasoning

• Relation databases
  • (and obituaries, biographical dictionaries, etc.)

• IBM Watson
  “In 1594 he took a job as a tax collector in Andalusia”

Candidates:
  • Thoreau is a bad answer (born in 1817)
  • Cervantes is possible (was alive in 1594)
Context and Conversation in Virtual Assistants like Siri

• Coreference helps resolve ambiguities
  U: “Book a table at Il Fornaio at 7:00 with my mom”
  U: “Also send her an email reminder”

• Clarification questions:
  U: “Chicago pizza”
  S: “Did you mean pizza restaurants in Chicago or Chicago-style pizza?”
Limitations of Factoid Q/A

• Question must query a specific fact that is explicitly stated somewhere in the document corpus.

• Does not allow aggregating or accumulating information across multiple information sources.

• Does not require “deep compositional” semantics, nor inferential reasoning to generate answer. → Natural language generation!
Information Retrieval (IR)-based QA

- Factoid QA pipeline
- Factoid QA evaluation
- Common Knowledge used in QA
- Recent QA tasks
What are recent tasks for QA?

• Reading comprehension (machine reading)

• Popular QA benchmarks

• Visual Question Answering
Reading Comprehension Q/A

• Answer questions that test comprehension of a specific document.
• Use standardized tests of reading comprehension to evaluate performance (Hirschman et al. 1999; Rilo & Thelen, 2000; Ng et al. 2000; Charniak et al. 2000).
School Kids: Clean Up Creek!

(EVERETT, WASHINGTON, June, 1988) – It has taken five years of hard work. But a group of children have cleaned up Pigeon Creek. In 1983, the creek was so dirty that the fish had all died. A group of kids at Jackson School decided to do something about it. It became a project for their whole class.

First they cleaned out the bottom of the creek, called the creek bed. There were many weeds. They also found lot of trash and litter. Then the students raised fish eggs in a tank of water called an aquarium. When the eggs hatched, they emptied the new fish into the creek. They wanted others to stop making the creek dirty. So they made signs that said “Don’t Dump”. They put the signs near the creek. They also made little books, called booklets. The booklets told people how to keep the creek clean. Now, the water is clean and new fish are being born in the creek. Pigeon Creek is a sign of the good things young people can do.

Q1: Who cleaned up the creek?  Q2: What was the name of the creek?  Q3: When did the work begin?  Q4: Where is the bed of a creek?  Q5: Why did the kids make booklets?
Large Scale Reading Comprehension Data

• DeepMind’s large-scale data for reading comprehension Q/A (Hermann et al., 2015).
  • News articles used as source documents.
  • Questions constructed automatically from article summary sentences.

Table 3: Original and anonymised version of a data point from the Daily Mail validation set. The anonymised entity markers are constantly permuted during training and testing.
Deep LSTM Reader

- DeepMind uses LSTM recurrent neural net (RNN) to encode document and query into a vector that is then used to predict the answer.

Incorporated various forms of attention to focus the reader on answering the question while reading the document.
Stanford Question Answering Dataset (SQuAD)

• Question: Which team won Super Bowl 50?
• Passage: Super Bowl 50 was an American football game to determine the champion of the National Football League (NFL) for the 2015 season. The American Football Conference (AFC) champion Denver Broncos defeated the National Football Conference (NFC) champion Carolina Panthers 24–10 to earn their third Super Bowl title. The game was played on February 7, 2016, at Levi's Stadium in the San Francisco Bay Area at Santa Clara, California.
• 100k examples
• Answer must be a span in the passage
Stanford Question Answering Dataset (SQuAD)

• Question: Which team won Super Bowl 50?
• Passage: Super Bowl 50 was an American football game to determine the champion of the National Football League (NFL) for the 2015 season. The American Football Conference (AFC) champion Denver Broncos defeated the National Football Conference (NFC) champion Carolina Panthers 24–10 to earn their third Super Bowl title. The game was played on February 7, 2016, at Levi's Stadium in the San Francisco Bay Area at Santa Clara, California.

• How do we know which sentence to select?
• Furthermore, which phrase is the answer?
Genghis Khan united the Mongol and Turkic tribes of the steppes and became Great Khan in 1206. He and his successors expanded the Mongol empire across Asia. Under the reign of Genghis' third son, Ögedei Khan, the Mongols destroyed the weakened Jin dynasty in 1234, conquering most of northern China. Ögedei offered his nephew Kublai a position in Xingzhou, Hebei. Kublai was unable to read Chinese but had several Han Chinese teachers attached to him since his early years by his mother Sorghaghtani. He sought the counsel of Chinese Buddhist and Confucian advisers. Möngke Khan succeeded Ögedei's son, Güyük, as Great Khan in 1251. He

**When did Genghis Khan kill Great Khan?**
CoQA: A Conversational Question Answering Challenge

• Input: Jessica went to sit in her rocking chair. Today was her birthday and she was turning 80. Her granddaughter Annie was coming over in the afternoon and Jessica was very excited to see her. Her daughter Melanie and Melanie’s husband Josh were coming as well. Jessica had . . .

• Q1: Who had a birthday?
  • A1: Jessica
  • R1 (rational): Jessica went to sit in her rocking chair. Today was her birthday and she was turning 80.

• Q2: How old would she be?
  • A2: 80
  • R2 (rational): she was turning 80

• Q3: Did she plan to have any visitors?
  • A3: Yes
  • R3 (rational): Her granddaughter Annie was coming over
The NarrativeQA Reading Comprehension Challenge

• Title: Ghostbusters II
• Question: How is Oscar related to Dana?
• Answer: her son
• Summary snippet: ... Peter’s former girlfriend Dana Barrett has had a son, Oscar...

• Story snippet:
  • DANA (setting the wheel brakes on the buggy) Thank you, Frank. I’ll get the hang of this eventually.
  • She continues digging in her purse while Frank leans over the buggy and makes funny faces at the baby, OSCAR, a very cute nine-month old boy.
  • FRANK (to the baby) Hiya, Oscar. What do you say, slugger?
  • FRANK (to Dana) That’s a good-looking kid you got there, Ms. Barrett.
Visual Question Answering (VQA)

• Answer natural language questions about information in images.
• VaTech/MSR group has put together VQA dataset with ~750K questions over ~250K images (Antol et al., 2016).
VQA Examples

- What color are her eyes? What is the mustache made of?
- How many slices of pizza are there? Is this a vegetarian pizza?
- Is this person expecting company? What is just under the tree?
- Does it appear to be rainy? Does this person have 20/20 vision?
LSTM System for VQA

“How many horses are in this image?”
Bonus Assignment

• Your task: read a paragraph, create complex questions, and provide their respective answers using the given paragraph.
• In total, there are ~31 (+/- 2) paragraphs.
• Roughly requires 2 hours.
• Bonus 2 points (out of 100).
Bonus Assignment

• What’s the purpose of this bonus assignment?
  • Learning to construct complex questions that need to be answered with one or multiple sentences. (compared to the factoid questions that can be answered with a phrase or a couple of words)

  • Participating in a research study for complex question answering (by contributing your constructed question-answer pairs).
Q1: What types of questions do I ask?

1. You may want to ask questions starting with **why**, **how** or **what**. This would result in answers that either tries to reason or explain a concept. (Don’t ask who, which, when questions.)

2. In addition to this, you can also ask another (why, how or what) question as a **follow-up** to one (or more) of your questions if possible for the given summary paragraph.
   - These follow-up questions usually would ask more specific information for the question it is related to. You can make multiple follow-ups for a question and even **follow-ups to a follow-up question**.
Q1: What were the findings of the GAO report?

A1: In September 2014, GAO reported on the Department of Veterans Affairs' (VA) Program of Comprehensive Assistance for Family Caregivers (Family Caregiver Program) and found that the program office had limitations with its information technology (IT) system—the Caregiver Application Tracker (CAT).

Q2: How has the VA attempted to improve the CAT program?

A2: VA has initiated various projects since 2015 to implement a new system, but has not yet been successful in its efforts. (See figure.) Specifically, in July 2015 VA initiated a project to improve the reliability of CAT's data, called CAT Rescue.

Q2.1: Why did CAT Rescue end in April 2018?

A2.1: However, the department reported in January 2017 that it had identified numerous defects during system testing. The project ended in April 2018 before any new system capabilities were implemented.

Q2.2: Why was the CareT Program unsuccessful?

A2.2: The CareT project was expected to use improved data from CAT Rescue, while also adding new system capabilities. However, the user acceptance testing of CareT identified the need for the department to develop more system capabilities than originally planned.
Bad examples!

• **Q1:** *When* did GAO report on the Department of Veterans Affairs' (VA) Program of Comprehensive Assistance for Family Caregivers? (The question is too specific and the response can only be a date or time)

• **Q2:** *Who* initiated the CAT Rescue project to improve the reliability of CAT 's data? (To specific question again)
Bonus Assignment

• Q2: How should I provide the answers to the questions I ask?
• For each question you make, you should copy-paste the answer span from the given summary paragraph (for which you made the question), that either partially or completely answers that question.
  • Here the answer span means the sentences that you considered to generate the question or the sentences that you think contains your full or part of the intended answer. Note for your answer, copy-paste one or more complete sentence(s), not just words or phrases from the given paragraph. Please ensure that you do not copy a phrase or word as the answer!
Bonus Assignment

• Q3: How many question answer pairs should I make?
• You should try to make as many questions or their follow-up questions per summary paragraph as you can. The goal is to cover all the information in the given paragraph.
• Try to create at least 4 questions in total, with at least 1 follow-up question per paragraph.
• But if there are only 3 sentences, and you feel like you really can’t ask the fourth question. Three questions are fine. But try to come up with one follow-up question.
Bonus Assignment

• Q4: How do I access the annotation file and how do I turn my annotations in?

• Instructions will be available on blackboard, including details on the annotation guideline and format.
Bonus Assignment

• Q5: When it’s due?
• It will be released by this week (~Feb 29), and it’s due on March 22.
