

# Lecture 2

Pete Manolios  
Northeastern

# Fundamental Questions

- ▶ How do we describe computational systems?
- ▶ How do we reason about computational systems?
- ▶ Well?

# Fundamental Questions

The development of mathematics towards greater precision has led, as is well known, to the formalization of large tracts of it, so that one can prove any theorem using nothing but a few mechanical rules.

Kurt Gödel upon presenting his incompleteness theorems in 1931.

Either mathematics is too big for the human mind or the human mind is more than a machine.

Kurt Gödel (an interesting project, Ankit?)

# Mechanized Reasoning

*Instead of debugging a program, one should prove that it meets its specifications, and this proof should be checked by a computer program.*

“A Basis for a Mathematical Theory of Computation”  
1961

John McCarthy

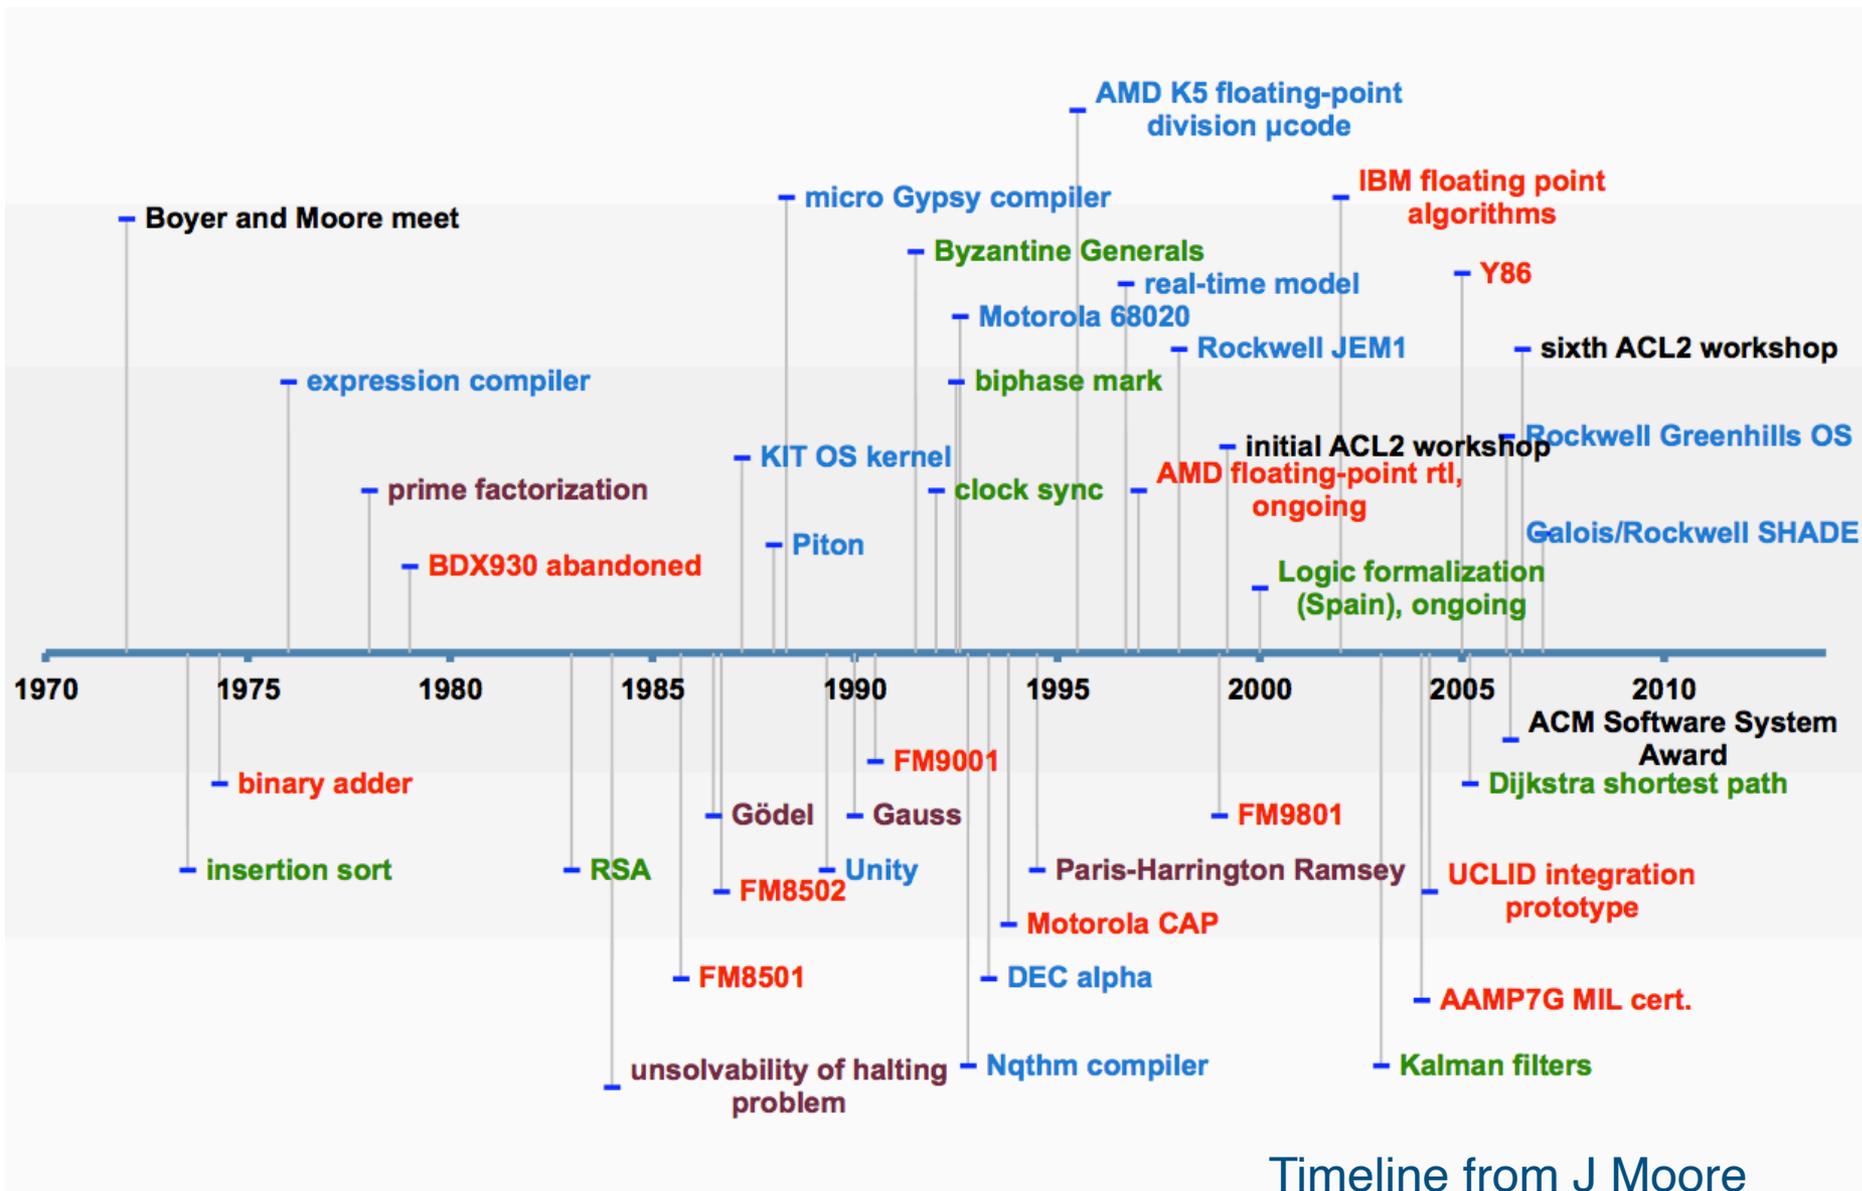

# Boyer-Moore Theorem Provers

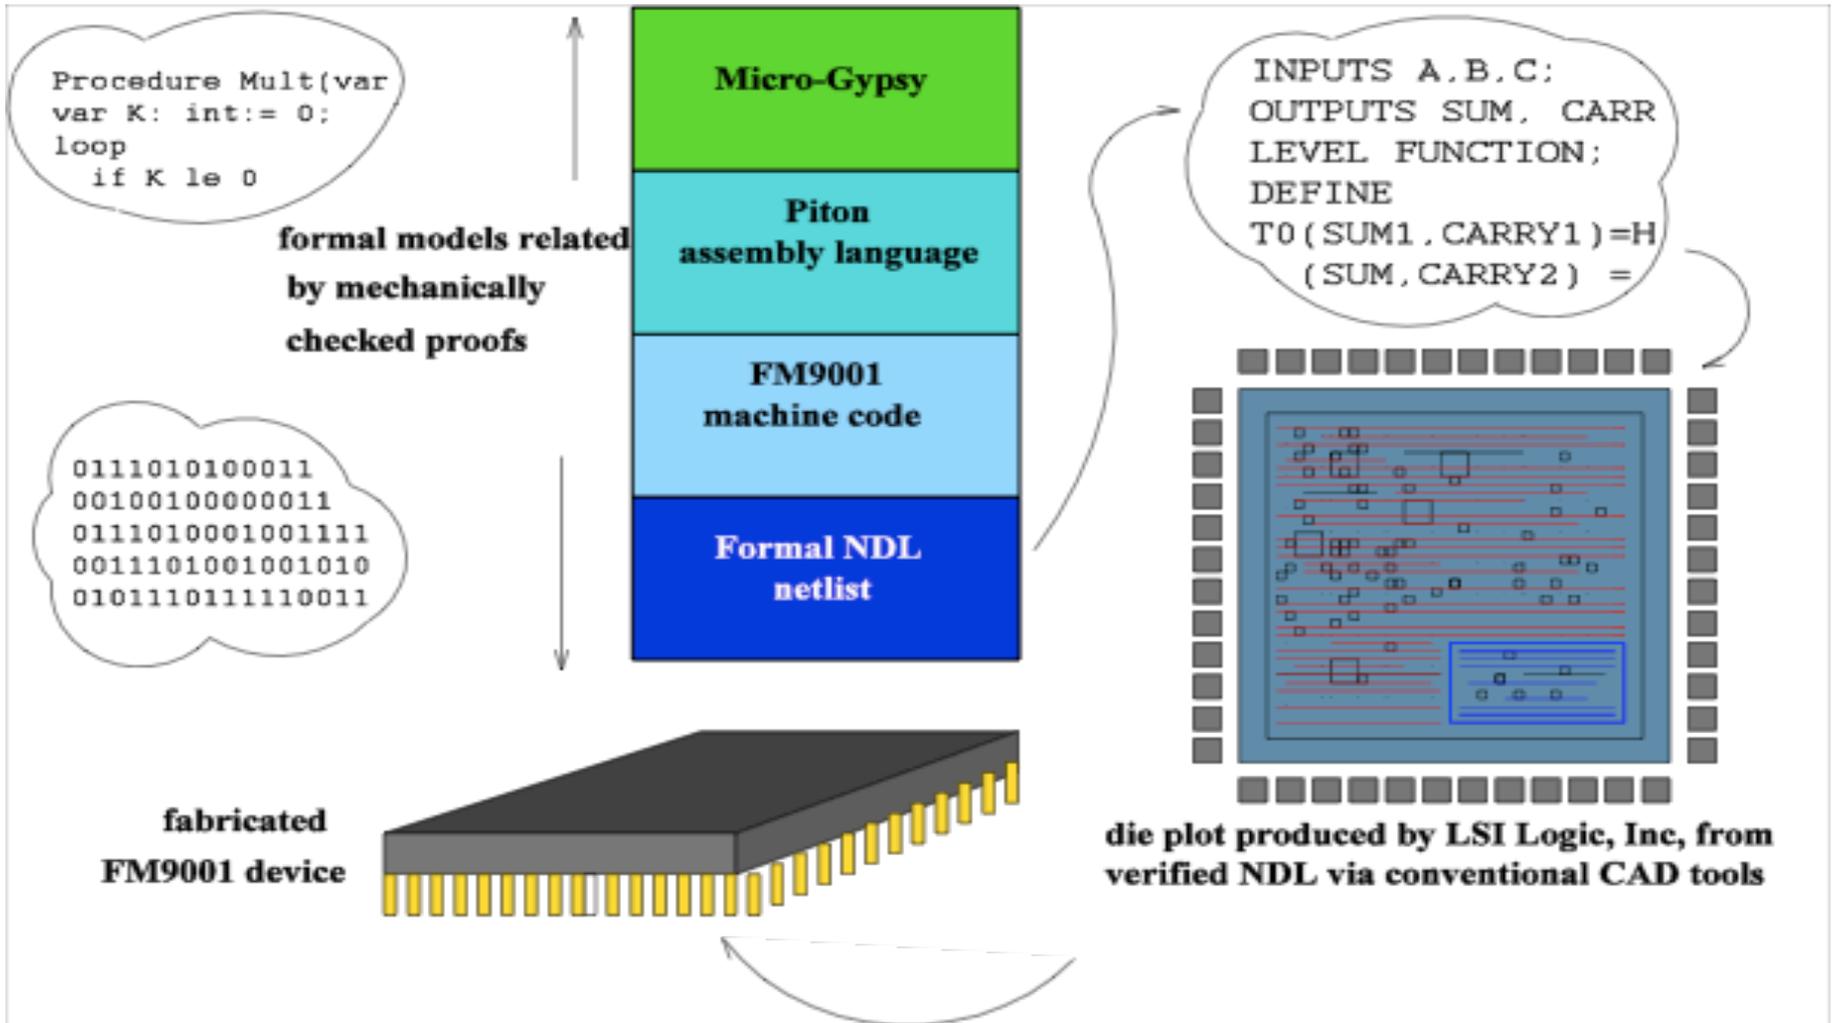

- ▶ 1970's
  - ▶ Edinburgh Pure Lisp Theorem Prover (1973)
  - ▶ A Computational Logic (1978)
- ▶ 1980's
  - ▶ NQTHM (1981)
  - ▶ ACL2 (1989) A Computational Logic for Applicative Common Lisp
- ▶ 1990's-Present
  - ▶ Kaufmman joins as developer
  - ▶ Workshops (16 already); huge regression suite
- ▶ 2000's:
  - ▶ ACL2 books
  - ▶ Development environments (ACL2 Sedan)
  - ▶ 2005 ACM Software System Award (Boyer, Kaufmann, Moore)

# Boyer-Moore Theorems Proved

- ▶ 1970's: Simple List Processing
  - ▶ Associativity of append
  - ▶ Prime factorizations are unique
- ▶ 1980's: Academic Math & CS
  - ▶ Invertibility of RSA
  - ▶ Undecidability of halting problem
  - ▶ Gödel's First Incompleteness Theorem
  - ▶ Gauss' Law of Quadratic Reciprocity
  - ▶ CLI Stack:
    - ▶ Microprocessor
    - ▶ Assembler-linker-loader, Compiler, OS
    - ▶ High-level language

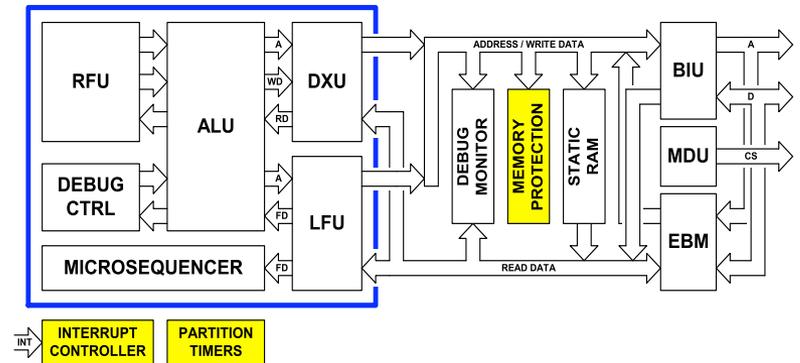

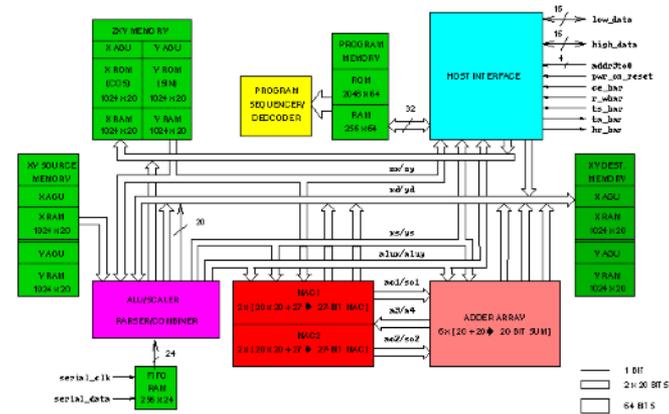

# CLI Stack

# Industrial Applications

- ▶ FDIV AMD Floating Point, IBM ...
- ▶ Motorola CAP DSP
  - ▶ Bit/cycle-accurate model
  - ▶ Run faster than SPW model
  - ▶ Proved correctness of pipeline hazard detection in microcode
  - ▶ Verified microcode programs
- ▶ Rockwell Collins JEM1
- ▶ Rockwell Collins AAMP7
  - ▶ MILS EAL-7 certification from NSA for their crypto processor
  - ▶ Verified separation kernel
- ▶ Centaur: Media Unit

# So What?

Mechanized reasoning for commercial systems ✓

- ▶ Scalability to industrial problems
- ▶ Tool maturity
- ▶ Human talent
- ▶ Repeatability
- ▶ Time to market
- ▶ ROI vs other methods

# What's Next?

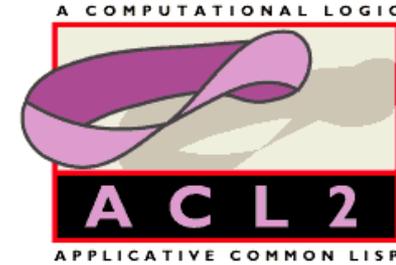

**Computer-aided reasoning for the masses**

**Teach freshmen how to reason about programs**

Slides by Pete Manolios for CS4820

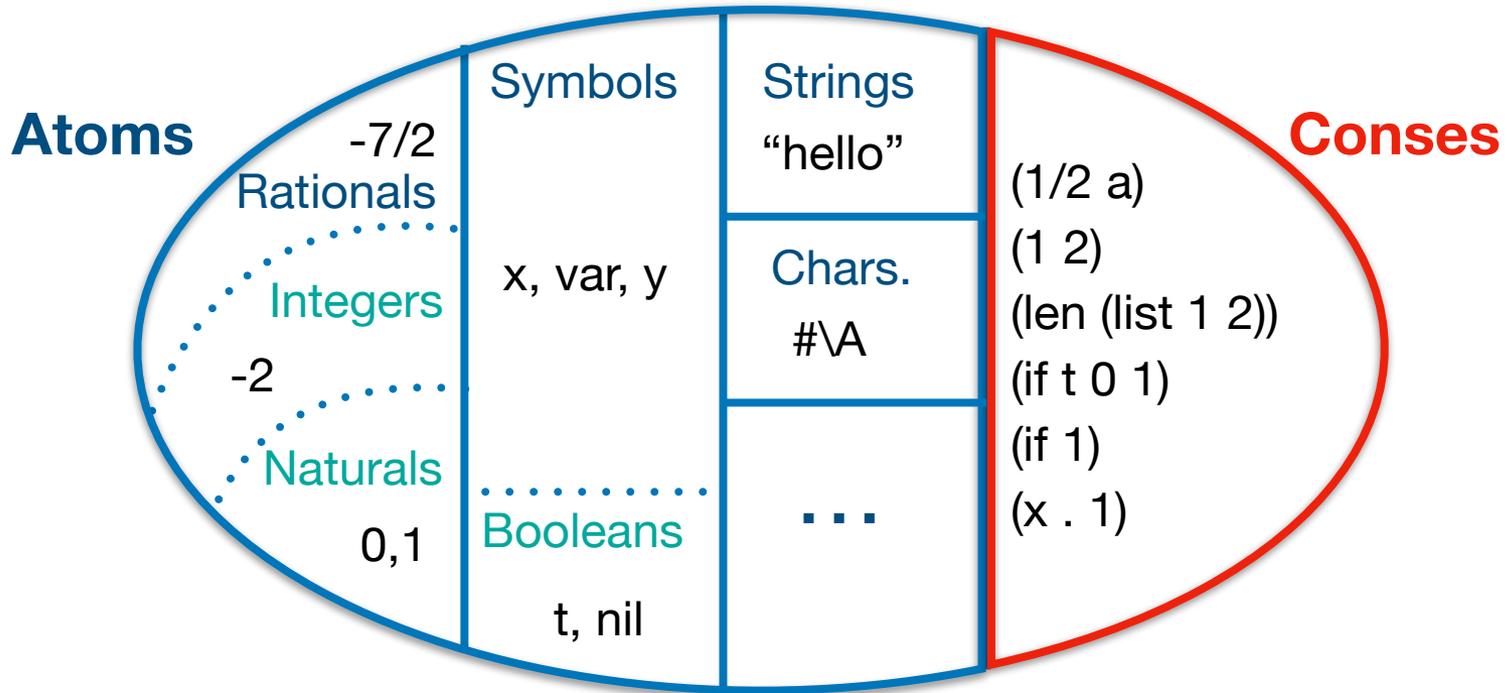

# ACL2 is ...

- ▶ A programming language:
  - ▶ Applicative, functional subset of Lisp
  - ▶ Compilable and executable
  - ▶ Untyped, first-order
- ▶ A mathematical logic:
  - ▶ First-order predicate calculus
  - ▶ With equality, induction, recursive definitions
  - ▶ Ordinals up to  $\epsilon_0$  (termination & induction)

# ACL2 Universe

**All = Conses  $\cup$  Atoms**

**Lists = Conses  $\cup$  { ( ) }**

**True-lists =  $\cup_{i \in \mathbb{N}} L_i$**

$L_0 = \{ ( ) \}$ ,  $L_{i+1} = L_i \cup \{ (\text{cons } x \ l) : x \in \text{All}, l \in L_i \}$

# Data Definitions

- ▶ Allow us to write recognizers & enumerators for subsets of the universe
- ▶ Singleton types
- ▶ Recognizers
- ▶ Enumerated Types
- ▶ Range Types
- ▶ Product Types
- ▶ Records
- ▶ Constructors & Accessors
- ▶ Listof Combinator
- ▶ Union Types
- ▶ Recursive Types
- ▶ Mutually Recursive Data Types
- ▶ Custom types

# DEMO

# Questions?

- ▶ HWK 1 due Sunday
- ▶ Next week:
  - ▶ Definitions
  - ▶ PL
  - ▶ Equational Reasoning
  - ▶ Read material before class
