## Alpha-Beta Pruning - Probability

## 1 Alpha-Beta Pruning

Figure 1: Alpha-Beta Pruning

1. Please fill in the state's utility values for the game tree above using alpha-beta pruning, cross the pruned edges and write down the Alpha Beta value from the parent state to the child state. You don't need to write Alpah-Beta values for the edges that have been pruned and the utility values for the pruned states.

|  | Alpha | Beta |
| :--- | :---: | :---: |
| 1 | $-\infty$ | $+\infty$ |
| 2 |  |  |
| 3 |  |  |
| 4 |  |  |
| 5 |  |  |
| 6 |  |  |
| 7 |  |  |
| 8 |  |  |
| 9 |  |  |
| 10 |  |  |

|  | Alpha | Beta |
| :--- | :--- | :--- |
| 11 |  |  |
| 12 |  |  |
| 13 |  |  |
| 14 |  |  |
| 15 |  |  |
| 16 |  |  |
| 17 |  |  |
| 18 |  |  |
| 19 |  |  |
| 20 |  |  |
| 21 |  |  |

## 2 Probability

Find the value of $P(X \mid Y=-y)$ using normalization.

| X | Y | P |
| :---: | :---: | :---: |
| +x | +y | 0.2 |
| +x | -y | 0.3 |
| -x | +y | 0.4 |
| -x | -y | 0.1 |

## 3 Bayes' rule

Suppose a woman in her 40 s, decides to have a medical test for breast cancer called a mammogram. If the test is positive, what is the probability that she has cancer? That obviously depends on how reliable the test is. Suppose she is told that the test has a sensitivity of $80 \%$, which means, if she has cancer, the test will be positive with probability 0.8. In other words,
$p(x=1 \mid y=1)=0.8$
Where $x=1$ is the event the mammogram is positive, and $y=1$ is the event she has breast cancer. Many people conclude that she is $80 \%$ likely to has cancer, but this is false! They fall for the base rate fallacy. Show why they are wrong, and calculate the actual chance that she has cancer ${ }^{1}$. You may need these: $p(y=1)=0.004$ and $p(x=1 \mid y=0)=0.1$.

[^0]
[^0]:    ${ }^{1}$ Based on this analysis, the US government decided not to recommend annual mammogram screening to women in their 40 s because the number of false alarms would cause needless worry and stress among women, and result in unnecessary, expensive, and potentially harmful tests.
