Time - 2.30 hrs.

Windows speech recogni.

Pulls info. from gmail with highl. msg.

20. sec audio as output.

(Target population - adults after sometime cant spk.)

→ The vocal is too low, so program is diff. to recognise.

He asked how to have higher pitch? orchest tech.

He asked move down three (thrice) to sys. to read a mail.

He uses the voice to make commands to sys.

Then the sys. reads the info. to him. He patiently wait for the sys. to complete.

When the sys. has 'yellow', he cannot interrupt the sys.

Uses a tv to read the gmail msg's

The sys. records the voice for 25 secs. & transmits.

All the sys. actions are spoken to him.

Once it do not recognise his voice, he was frustrated.

The sw abruptly closes like 3. times.

He asks it to scroll down.

If someth. is not clearly understood by sys., it shows

?, many it comes more frustration.
