Installation of jpt.jar Version 2.4.0

For eclipse on Windows, jpt.jar is placed in the following folder:

C:\eclipse\plugins\edu.neu.ccs

The folder edu.neu.ccs must be created. Use the corresponding plugins folder when working on other platforms.

If you are using another development environment, then put jpt.jar in the CLASSPATH or in whatever location that environment uses to find its Java libraries.

The Java Power Tools library jpt.jar has been tested in a number of Java development environments and has worked in all environments attempted.

The jpt.jar library, version 2.4.0, was compiled using Java 1.4.1_07 so it is compatible with Java 1.4. The jpt.jar was also tested and works correctly with eclipse using Java 1.5.
