Installation of \texttt{jpt.jar} Version 2.5.0

For \textit{eclipse} on Windows, \texttt{jpt.jar} should be placed in a folder whose name is \texttt{edu.neu.ccs} because this is the name of the main package in the Java Power Tools library. I choose the following specific folder:

\texttt{C:\eclipse-jpt\edu.neu.ccs}

You may of course choose whatever containing folder you wish. For me, the important point is to \textit{keep jpt.jar out of the eclipse directory tree} so it is easy to delete that tree when upgrading to a new version of \textit{eclipse}.

If you are using another development environment, then put \texttt{jpt.jar} in the \texttt{CLASSPATH} or in whatever location that environment uses to find its Java libraries.

The Java Power Tools library \texttt{jpt.jar} has been tested in a number of Java development environments and has worked in all environments attempted.

The \texttt{jpt.jar} library, version 2.5.0, was compiled using Java 1.4.2_11 so it is compatible with Java 1.4.2. This is useful when deploying applets for older browsers. The \texttt{jpt.jar} was also tested and works correctly with \textit{eclipse} using Java 1.5.x.
