

Installation of **jpt.jar** Version 2.4.0

For *eclipse* on Windows, **jpt.jar** is placed in the following folder:

C:\eclipse\plugins\edu.neu.ccs

The folder **edu.neu.ccs** must be created. Use the corresponding **plugins** folder when working on other platforms.

If you are using another development environment, then put **jpt.jar** in the **CLASSPATH** or in whatever location that environment uses to find its Java libraries.

The Java Power Tools library **jpt.jar** has been tested in a number of Java development environments and has worked in all environments attempted.

The **jpt.jar** library, version 2.4.0, was compiled using Java 1.4.1_07 so it is compatible with Java 1.4. The **jpt.jar** was also tested and works correctly with *eclipse* using Java 1.5.
